Discussion: Moving Forward - Data and Validation

- Collecting existing data
 - Are data accessible to users?
 - Do we need a catalog of relevant data?
- Gathering new data
 - What new data would have biggest impact on the stress models?
 - Is new relevant data being collected outside of SCEC?
- Validation
 - What quantities do we compare?
 - What metrics do we use to quantify differences?
 - Do we need common infrastructure to compute derived quantities?
 - Do we need benchmark(s) to verify/validate methodologies?
