

# ***Collaboratory for Interseismic Simulation and Modeling (CISM) Meeting***

**Palm Springs, California  
11 Sept 2016**

**an NSF+USGS center**

# *Collaboratory for Interseismic Simulation and Modeling (CISM)*

## **Project Goal**

**Develop a collaboratory where interdisciplinary teams can create system-specific models for time-dependent earthquake forecasting that are comprehensive, physics-based, data-calibrated, and prospectively testable**

**CISM has been funded for a three-year period by a \$2M grant from W.M. Keck Foundation**

## **Meeting Objectives**

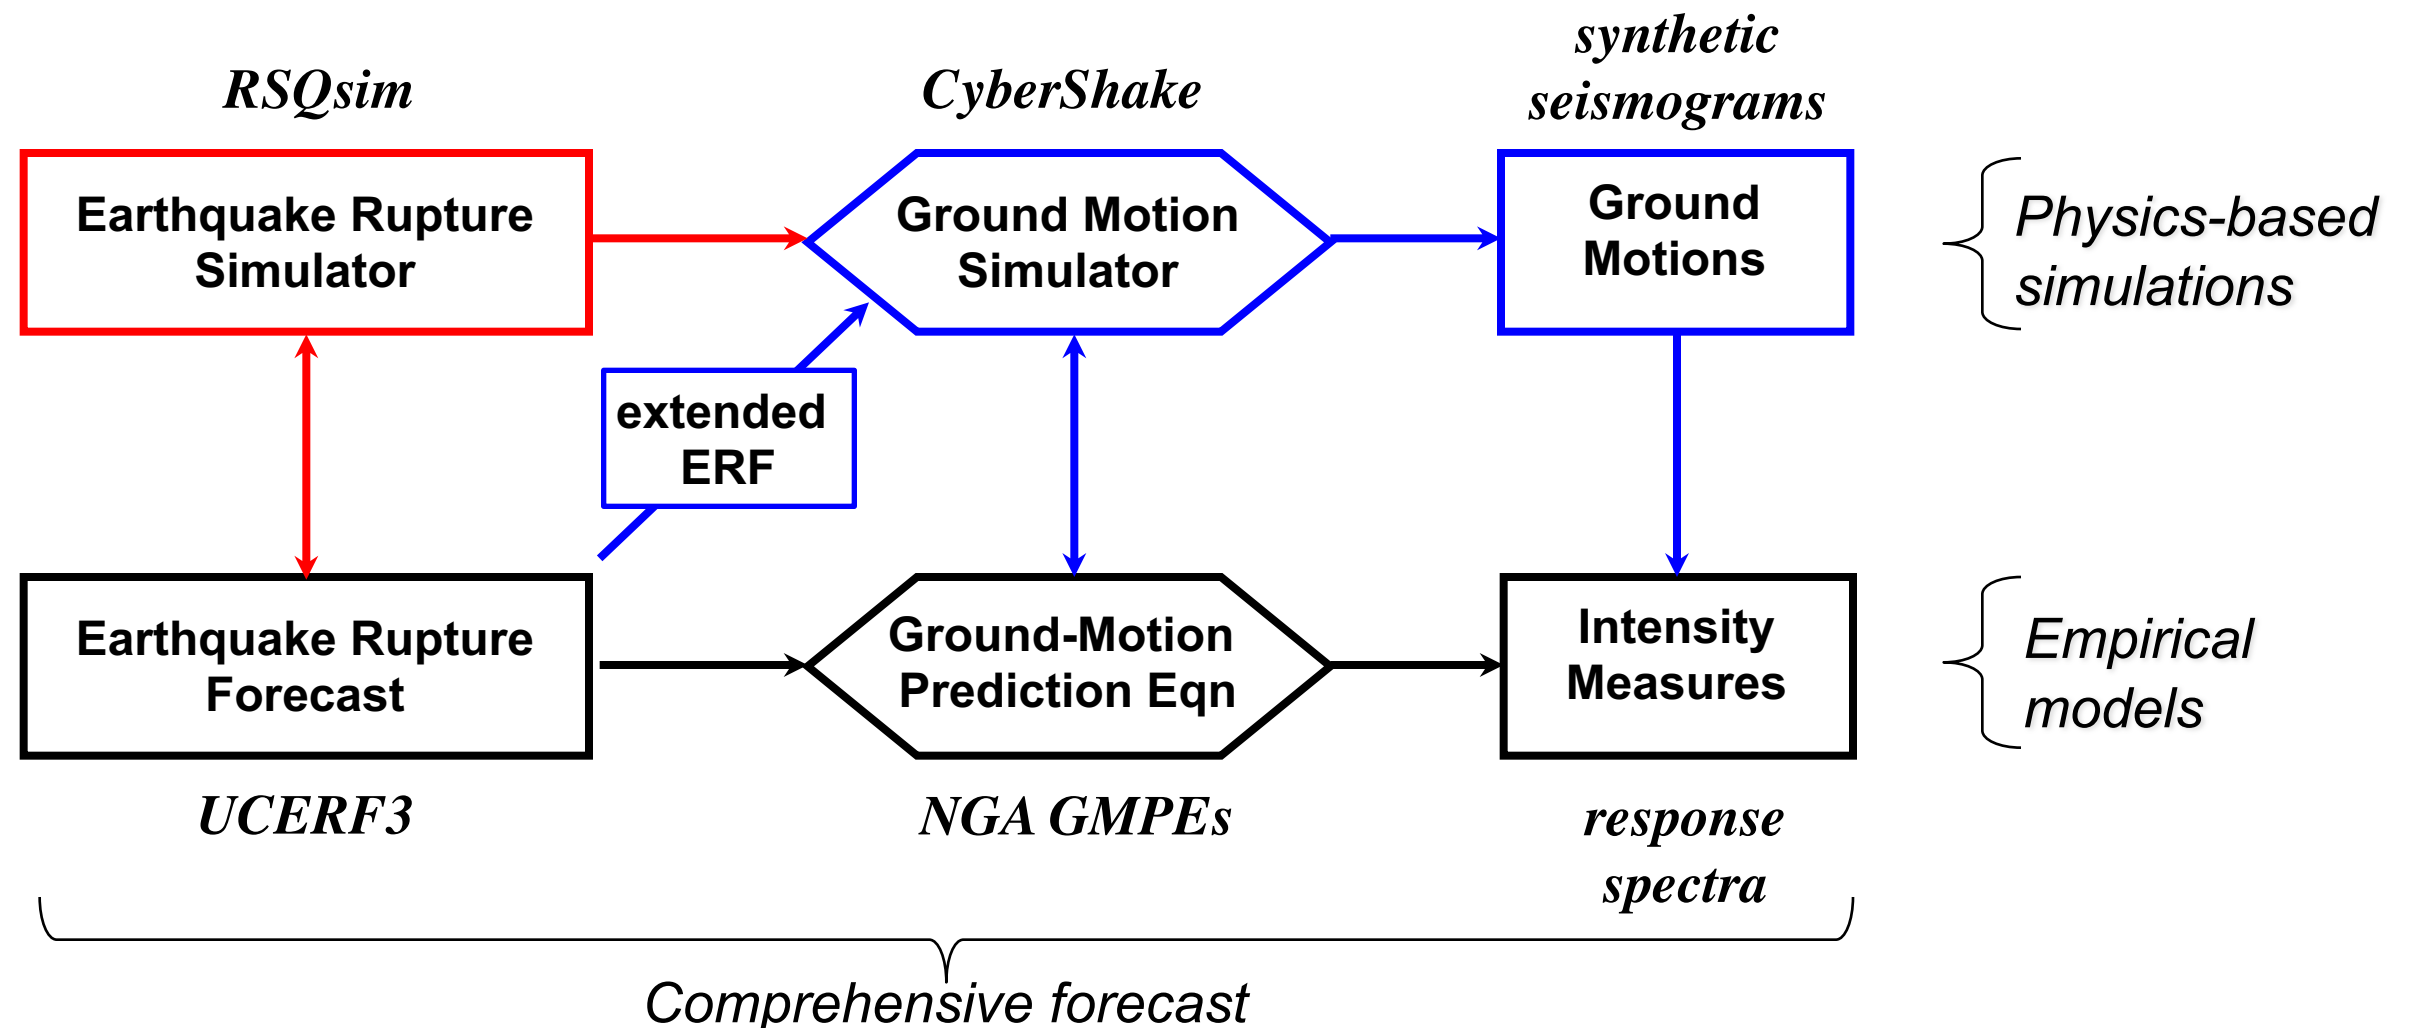

- 1. Review first-year progress of the CISM program**
- 2. Solicit community input to the second-year research plan**
- 3. Identify other earthquake models needed to achieve CISM goals**
- 4. Encourage SCEC scientists to participate in CISM development**

# *Collaboratory for Interseismic Simulation and Modeling (CISM)*

## Project Goal

Develop a collaboratory where interdisciplinary teams can create system-specific models for time-dependent earthquake forecasting that are comprehensive, physics-based, data-calibrated, and prospectively testable

## *Scales of Seismic Hazard Change*

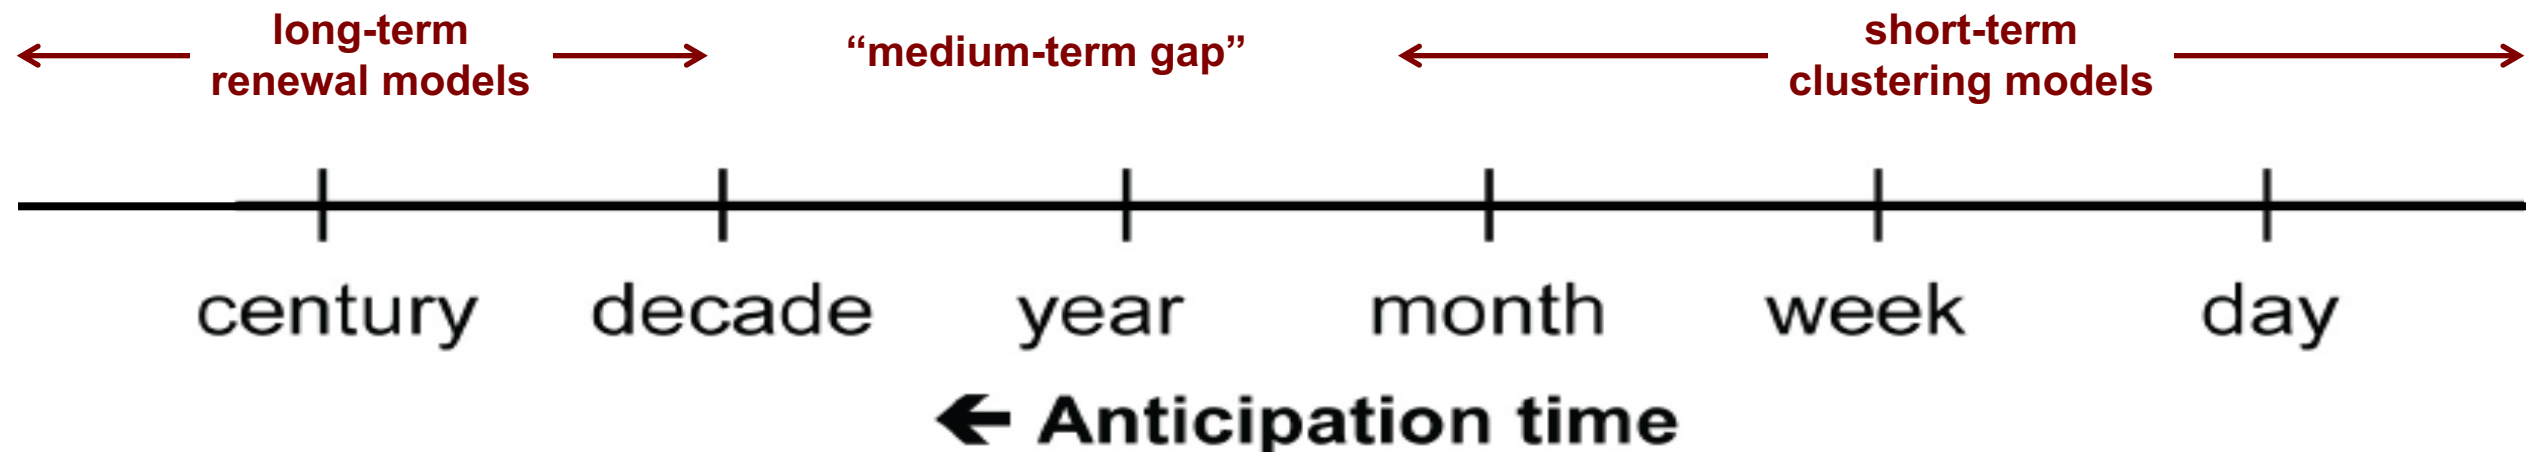

- **Faults accumulate stress over centuries during quasi-static tectonic loading**
  - stress cycle represented by Reid *renewal* models
- **Faults redistribute stress in seconds during dynamic ruptures**
  - earthquake sequences represented by Omori-Utsu *clustering* models

*Probabilistic Seismic  
Hazard Analysis (PSHA)*

*Operational Earthquake  
Forecasting (OEF)*

*“Seismic Climate Forecasting”*

*“Seismic Weather Forecasting”*

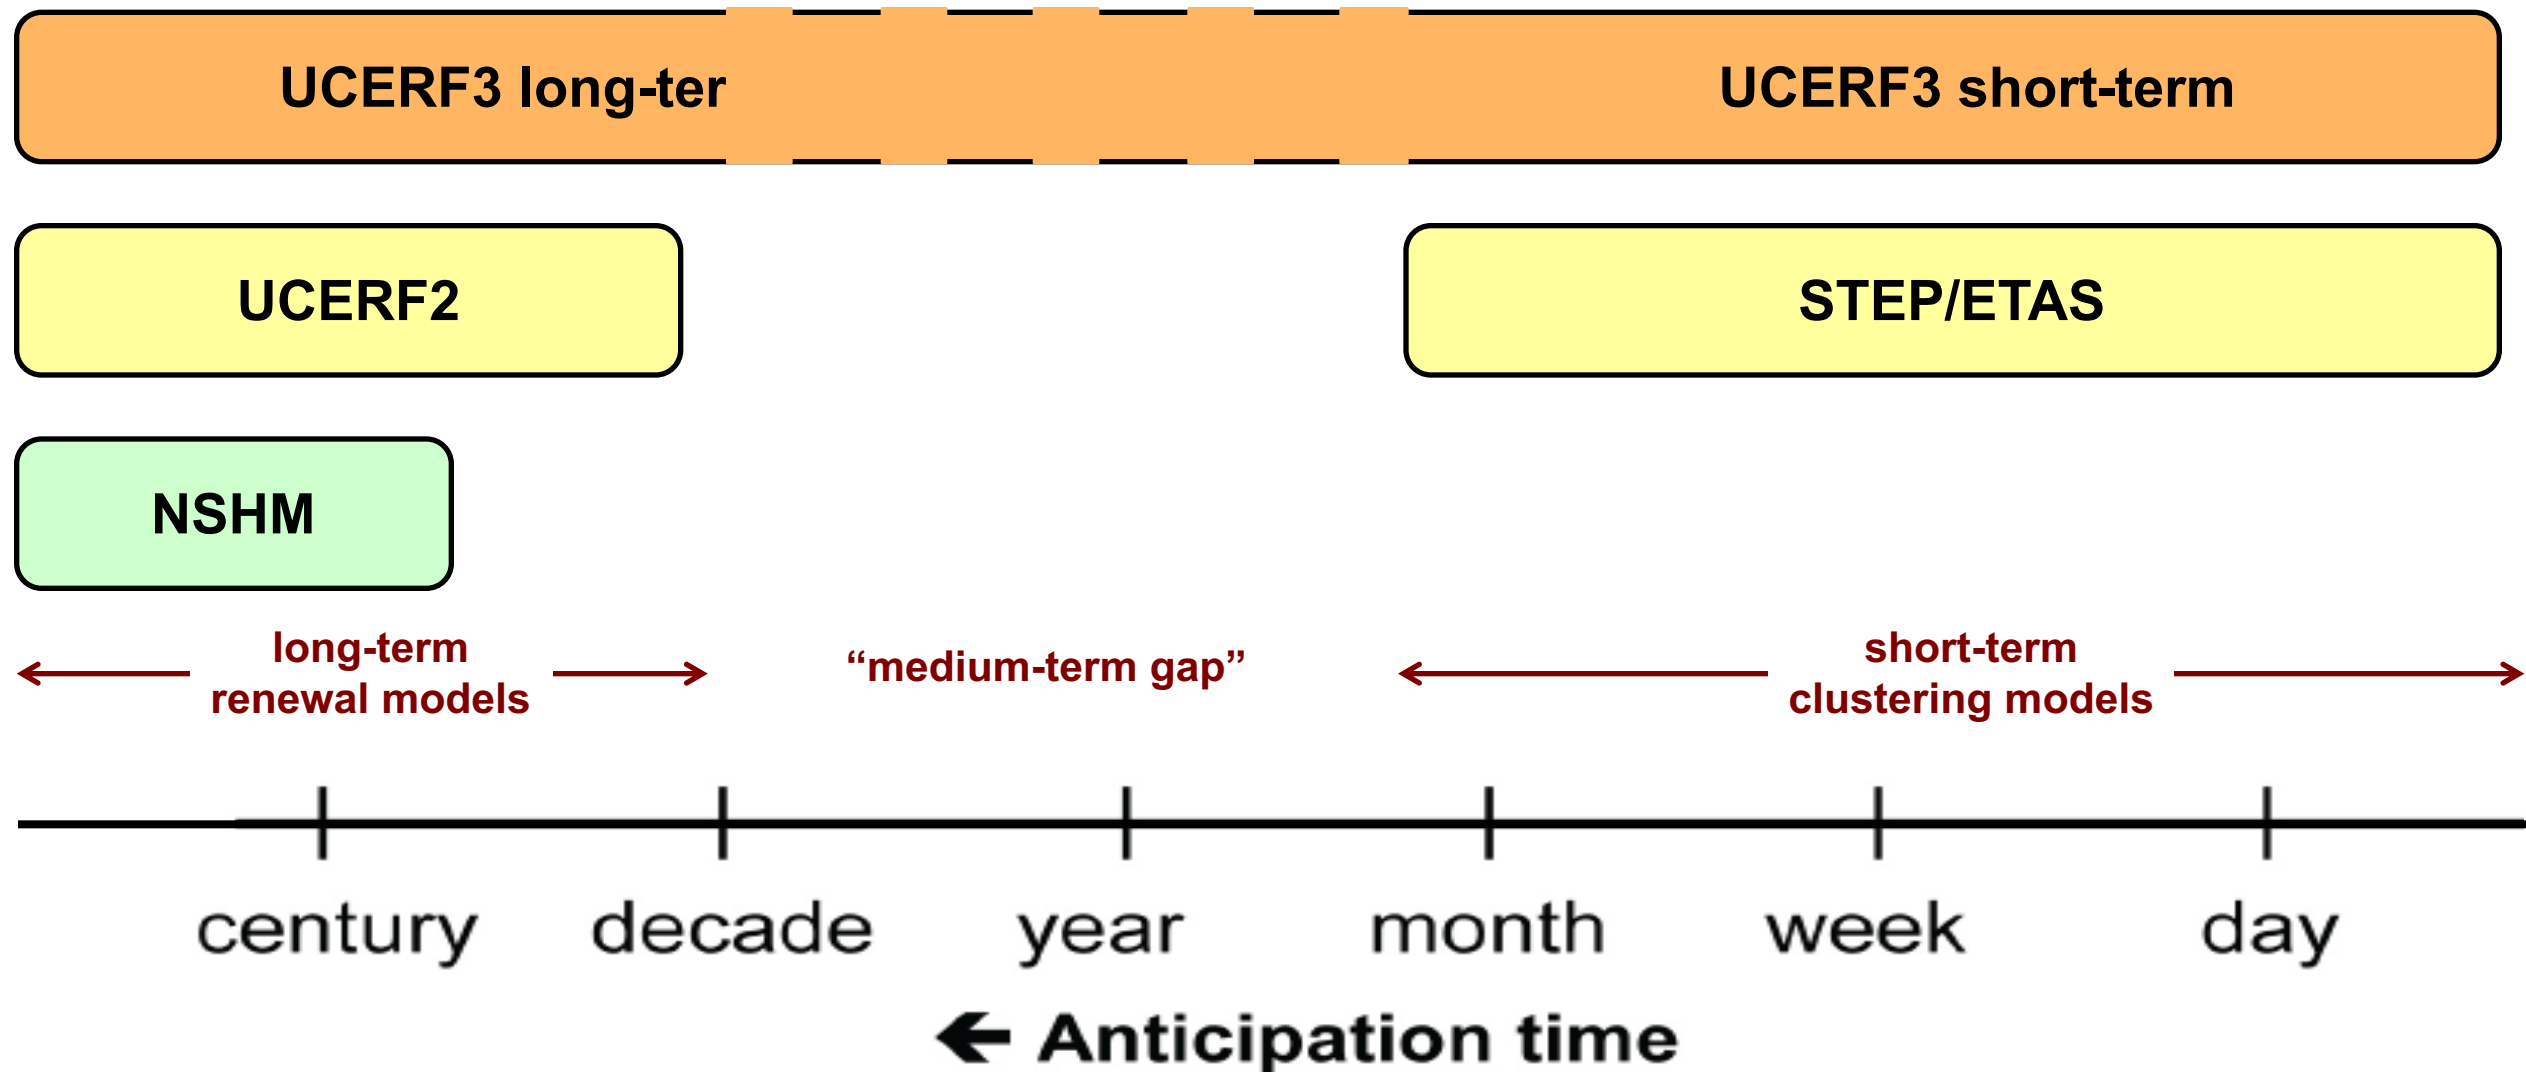

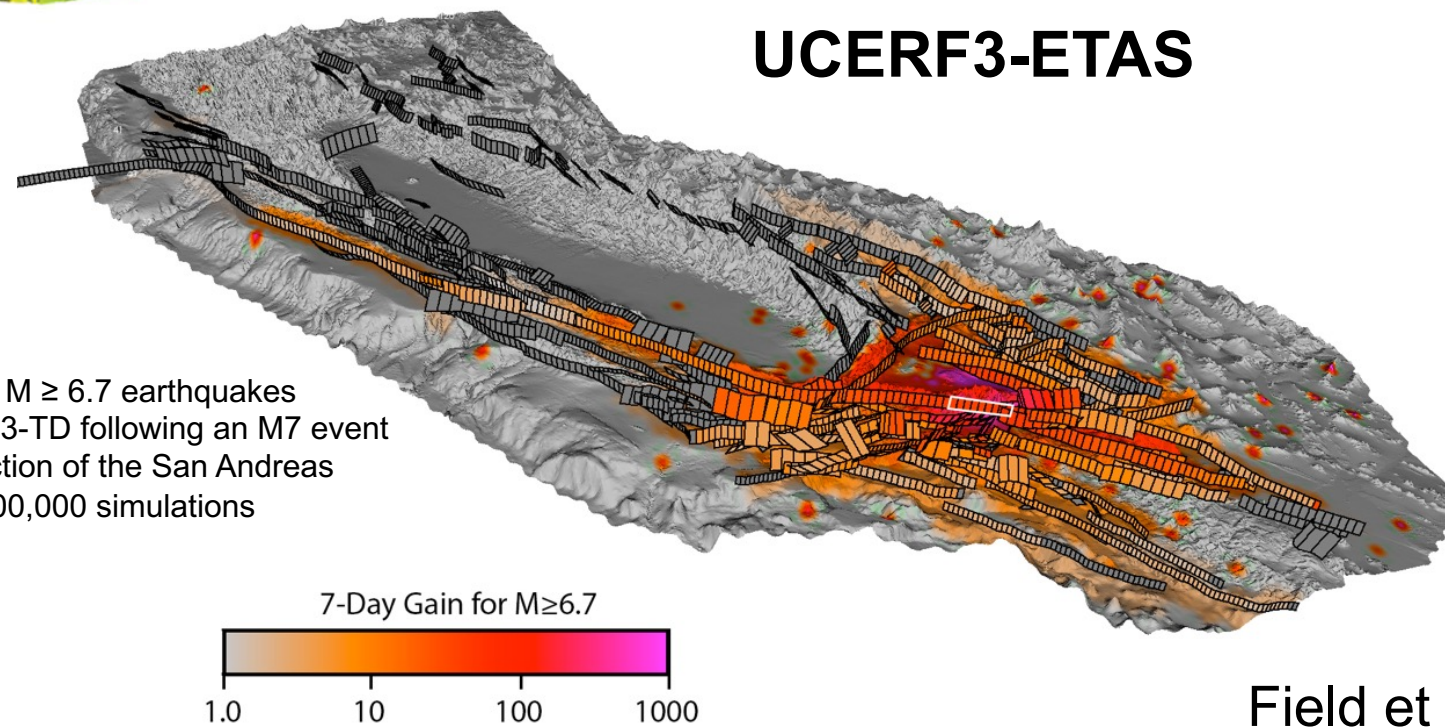

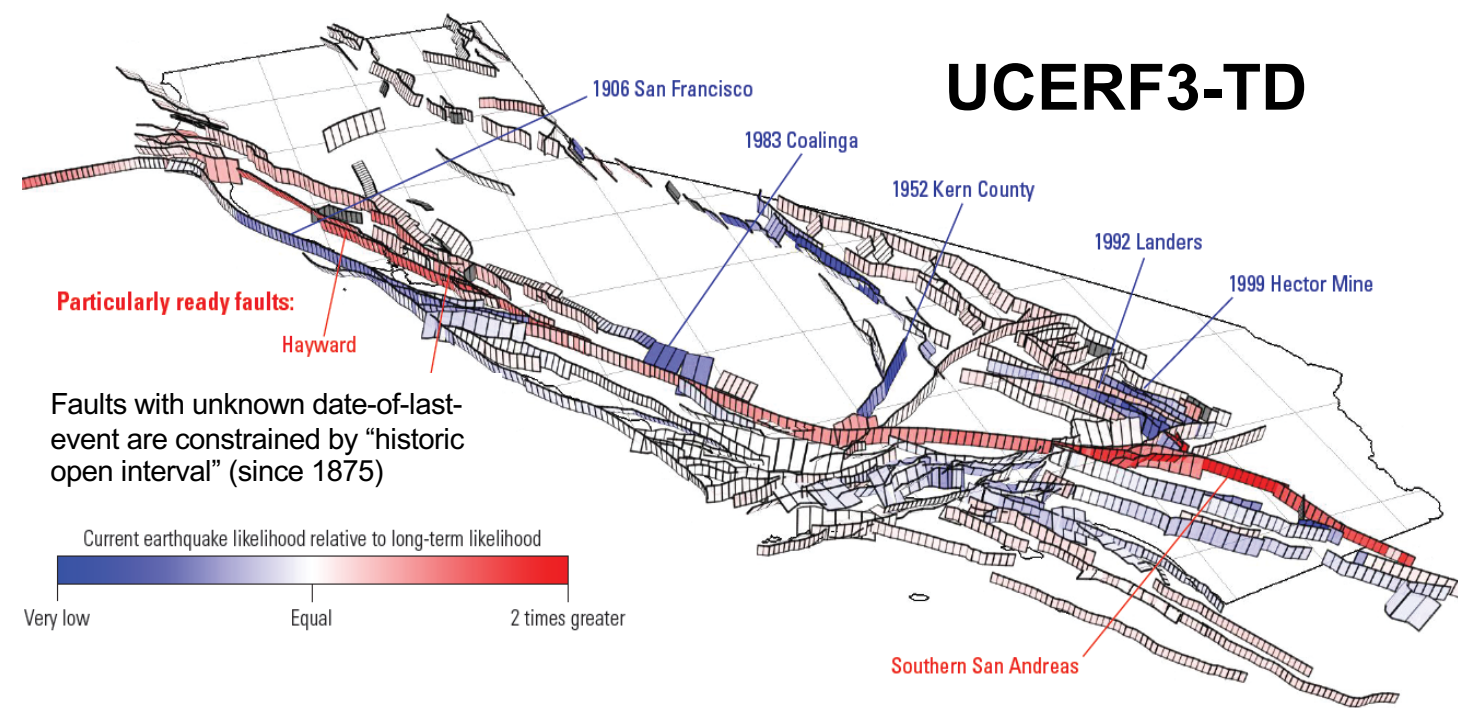

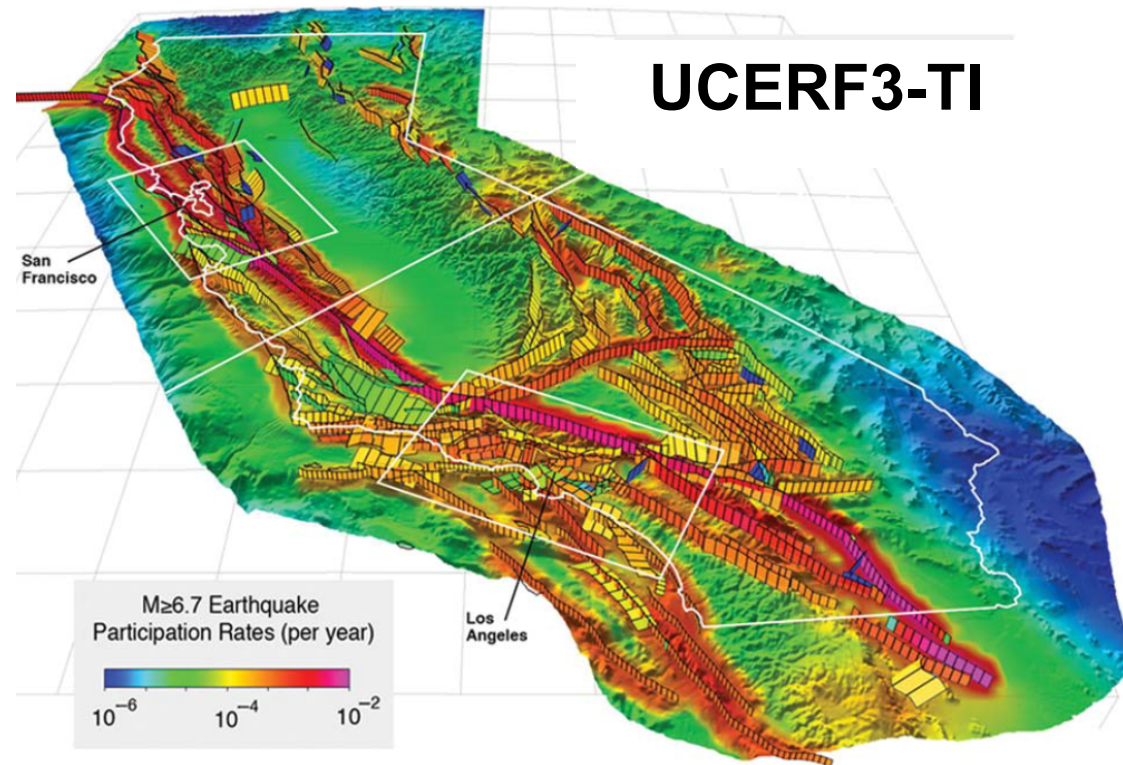

# California Earthquake Forecasting Models

*Reid renewal*

*Omori-Utsu clustering*

# Uniform California Earthquake Rupture Forecast (UCERF3)

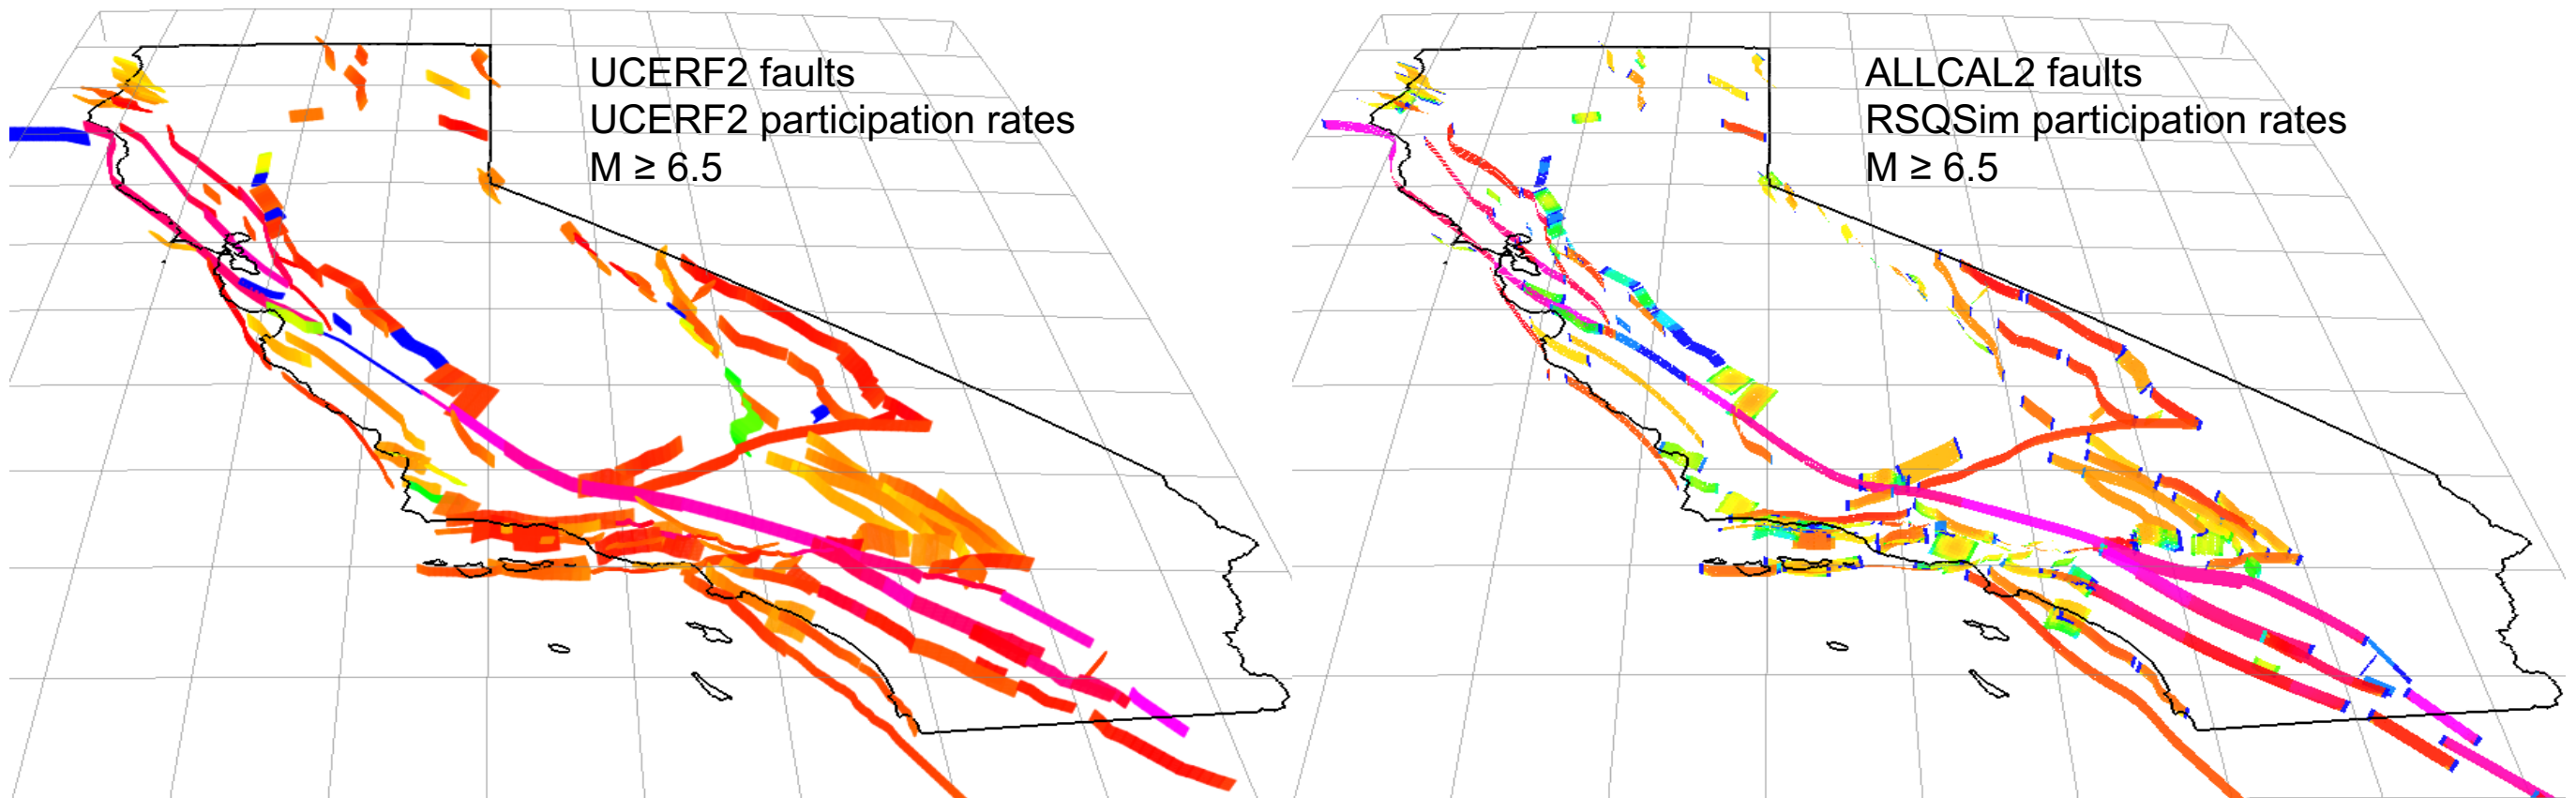

Probability gain of M ≥ 6.7 earthquakes relative to UCERF3-TD following an M7 event on the Mojave section of the San Andreas Fault, based on 100,000 simulations

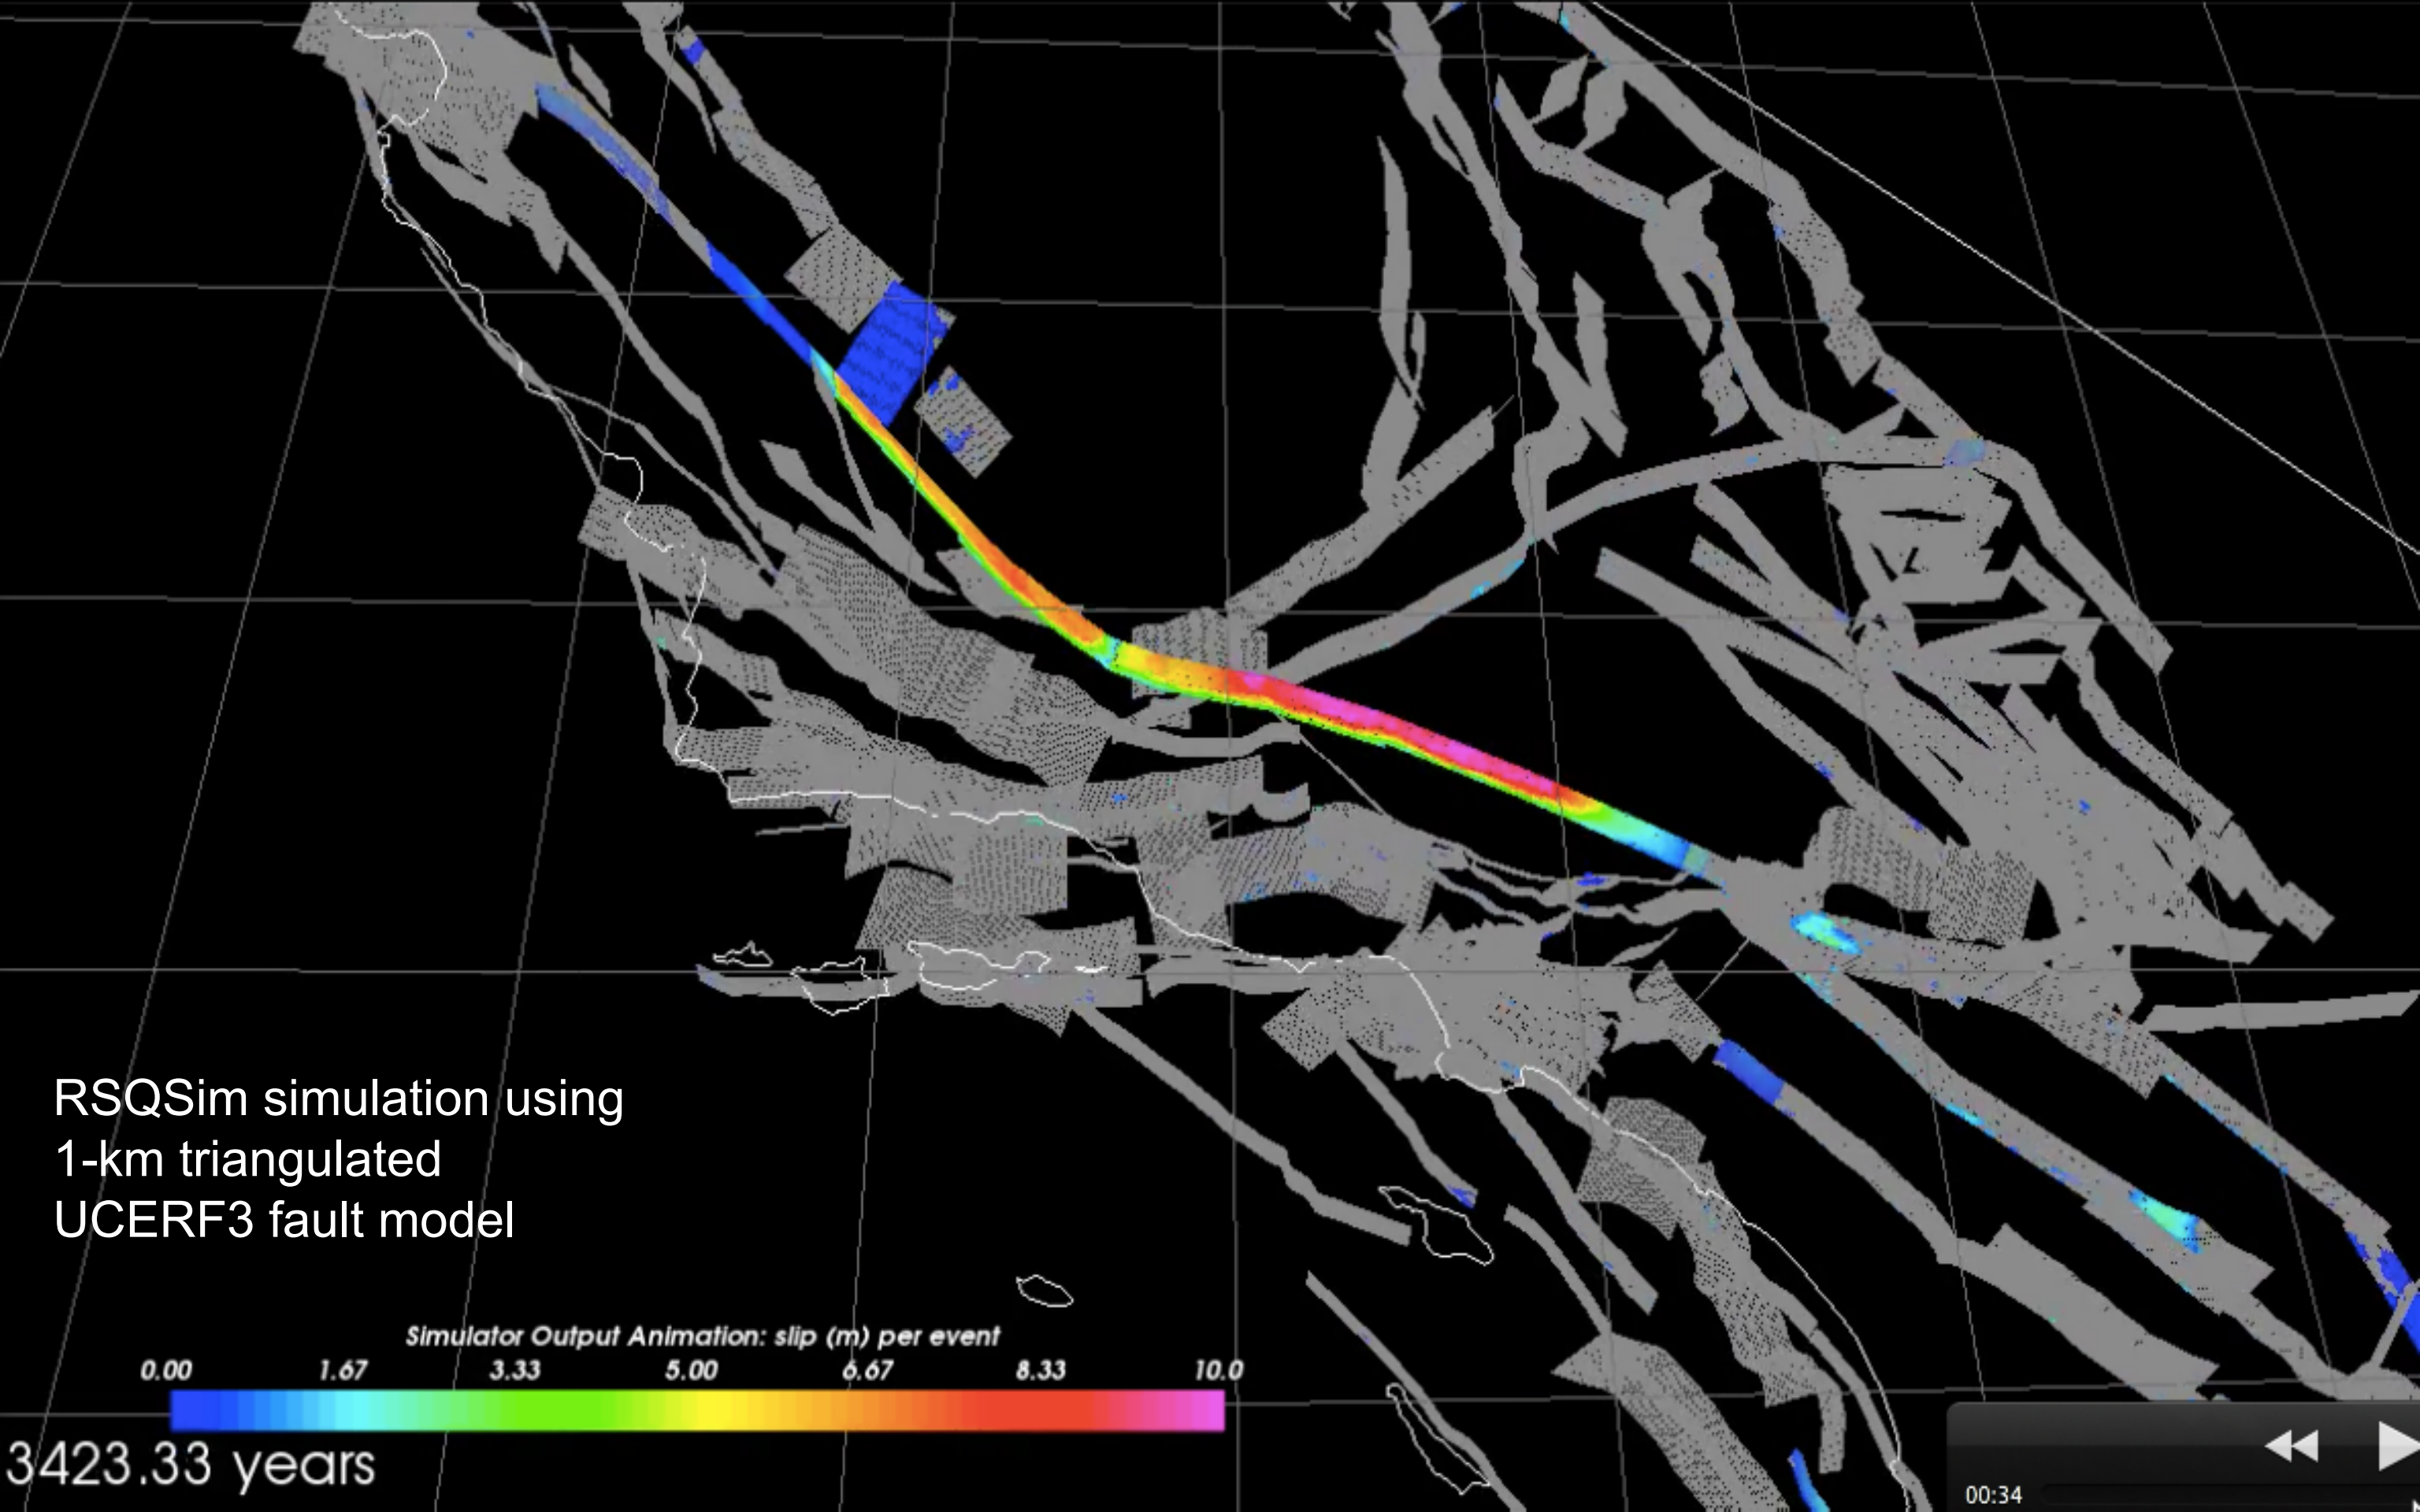

# *Rate-State Quake Simulator (RSQSim)*

(Dieterich & Richards-Dinger, 2010; Richards-Dinger & Dieterich, 2012)

- **Tectonic loading of faults by backslip approximation**
- **Rupture nucleation by rate- and state-dependent friction**
- **Radiation damping and dynamic overshoot**
- **Slip-mediated stress transfer in homogeneous elastic halfspace**
- **Very efficient 3-state computational algorithm**

RSQSim simulation using  
1-km triangulated  
UCERF3 fault model

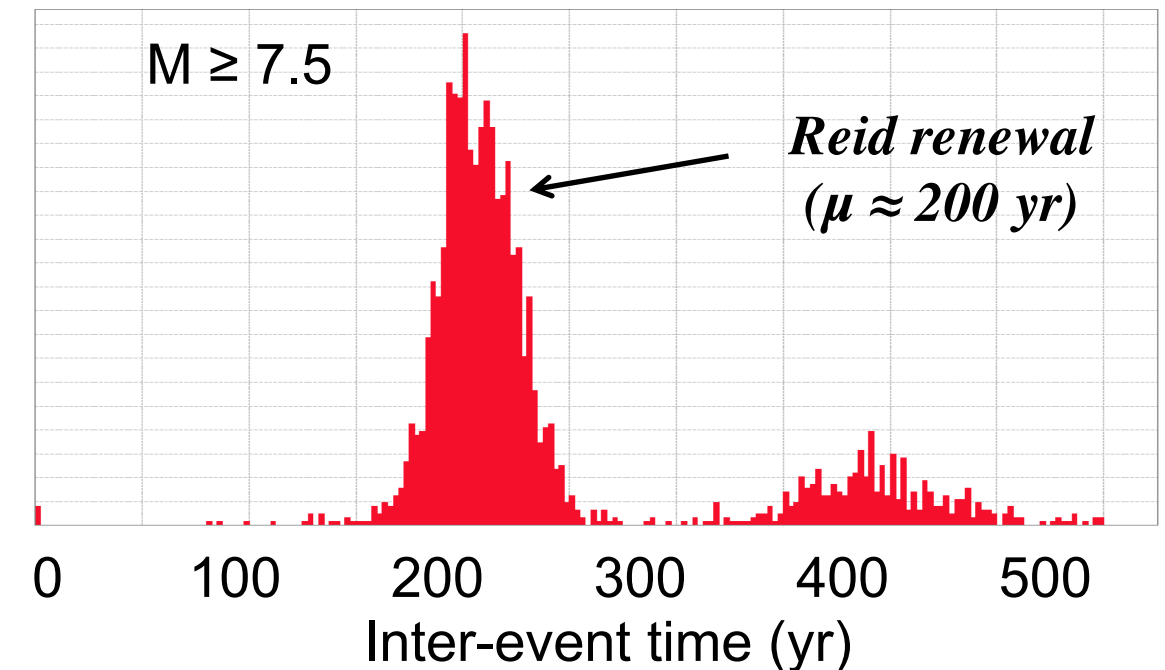

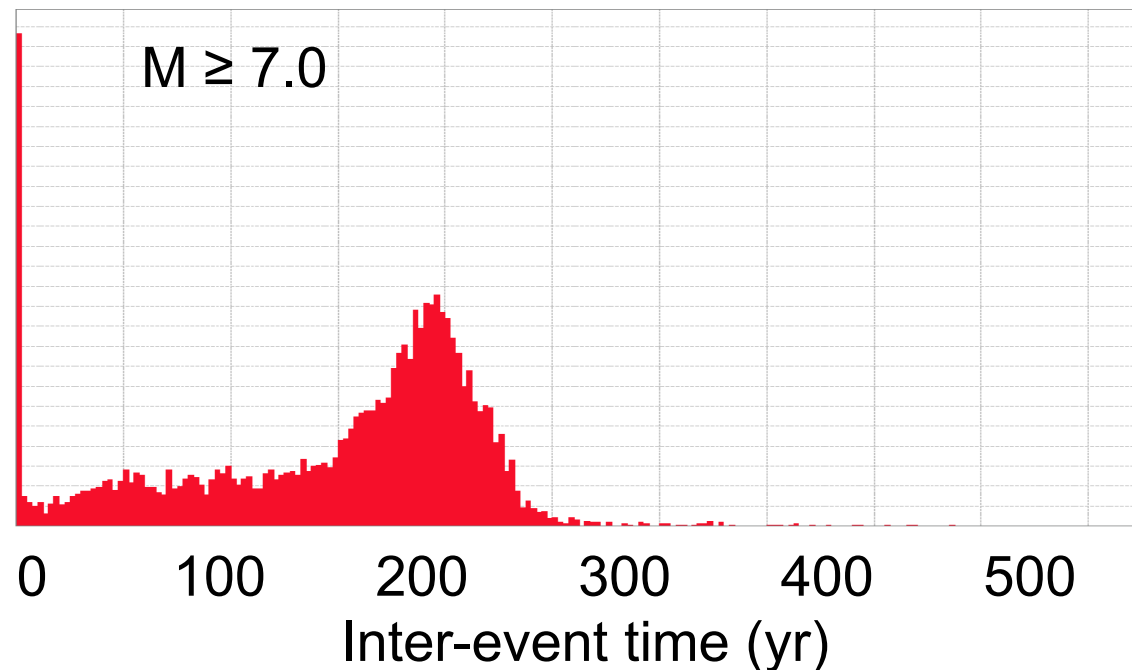

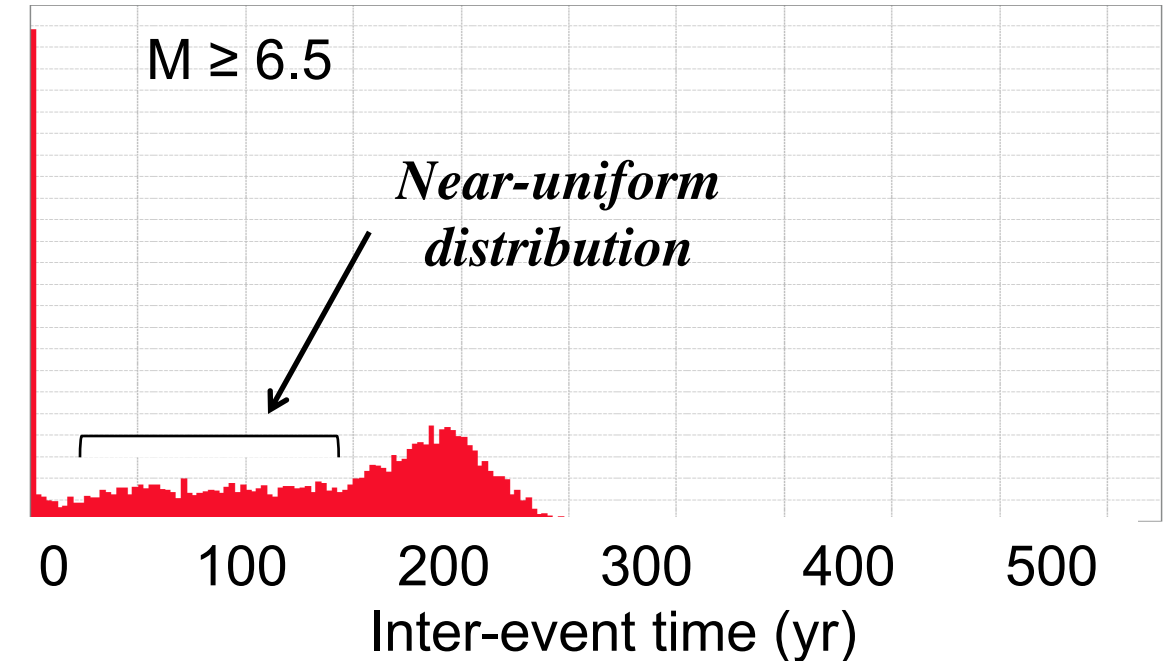

3423.33 years

00:34

# RSQSim Earthquake Simulator

(Dieterich, 1995; Dieterich & Richards-Dinger, 2010; Richards-Dinger & Dieterich, 2012)

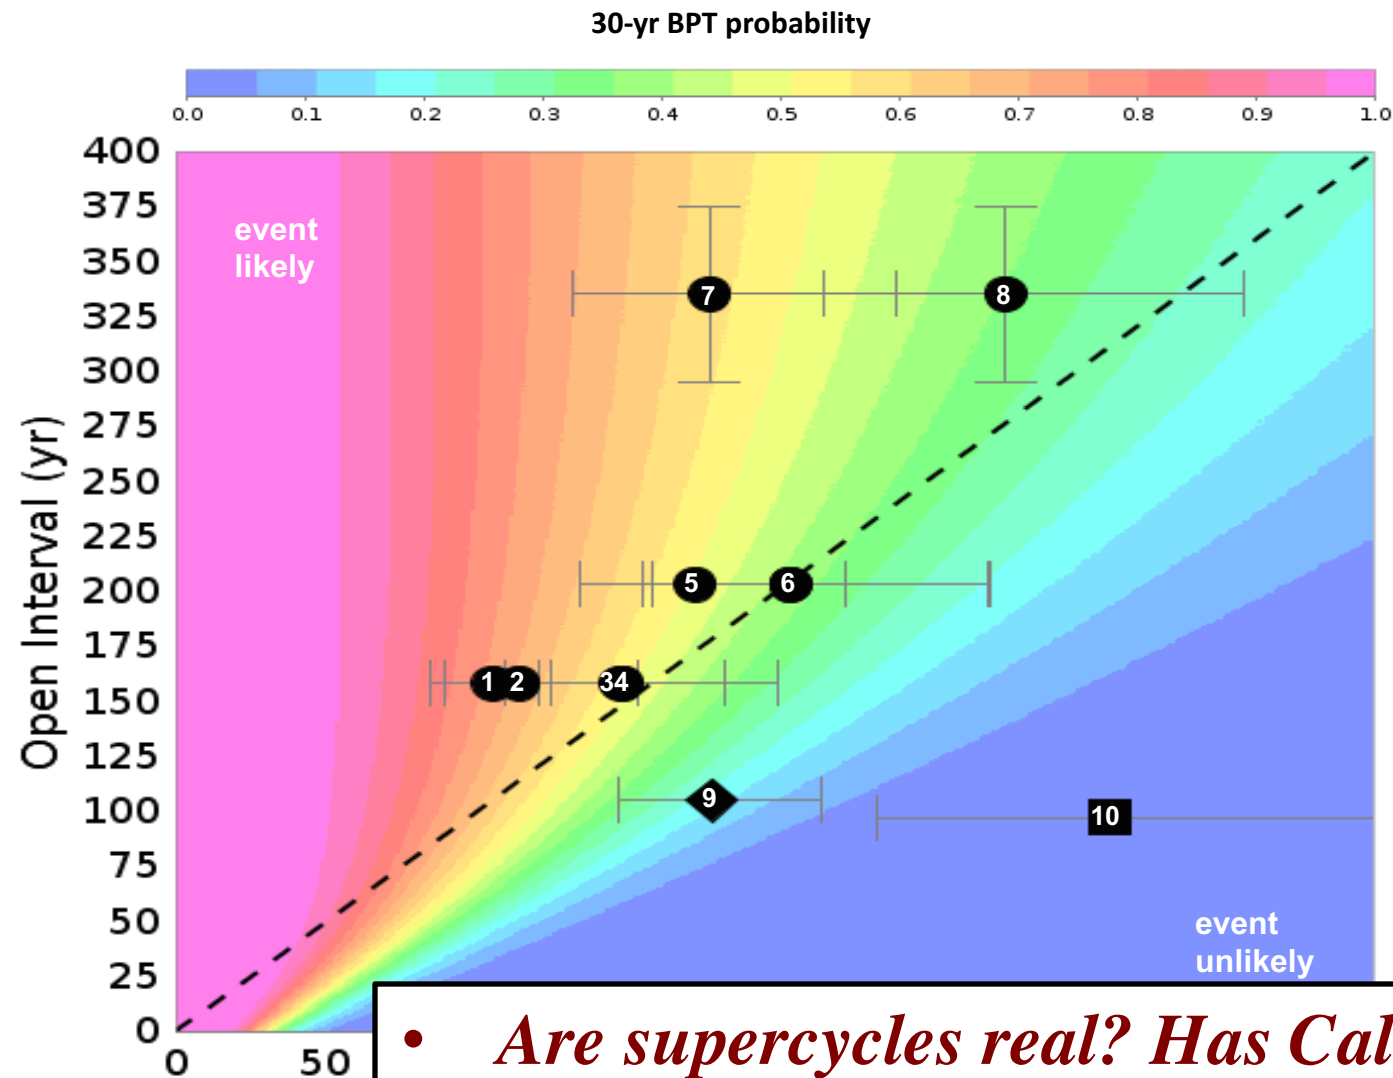

## Magnitude dependence of inter-event times on the Carrizo-Cholame sections of the San Andreas fault from a million-year catalog

# Seismic Supercycles?

## UCERF3 Paleoseismic Data for Selected Sites

## 100-yr Moving Average of Seismic Moment Release from Simulators

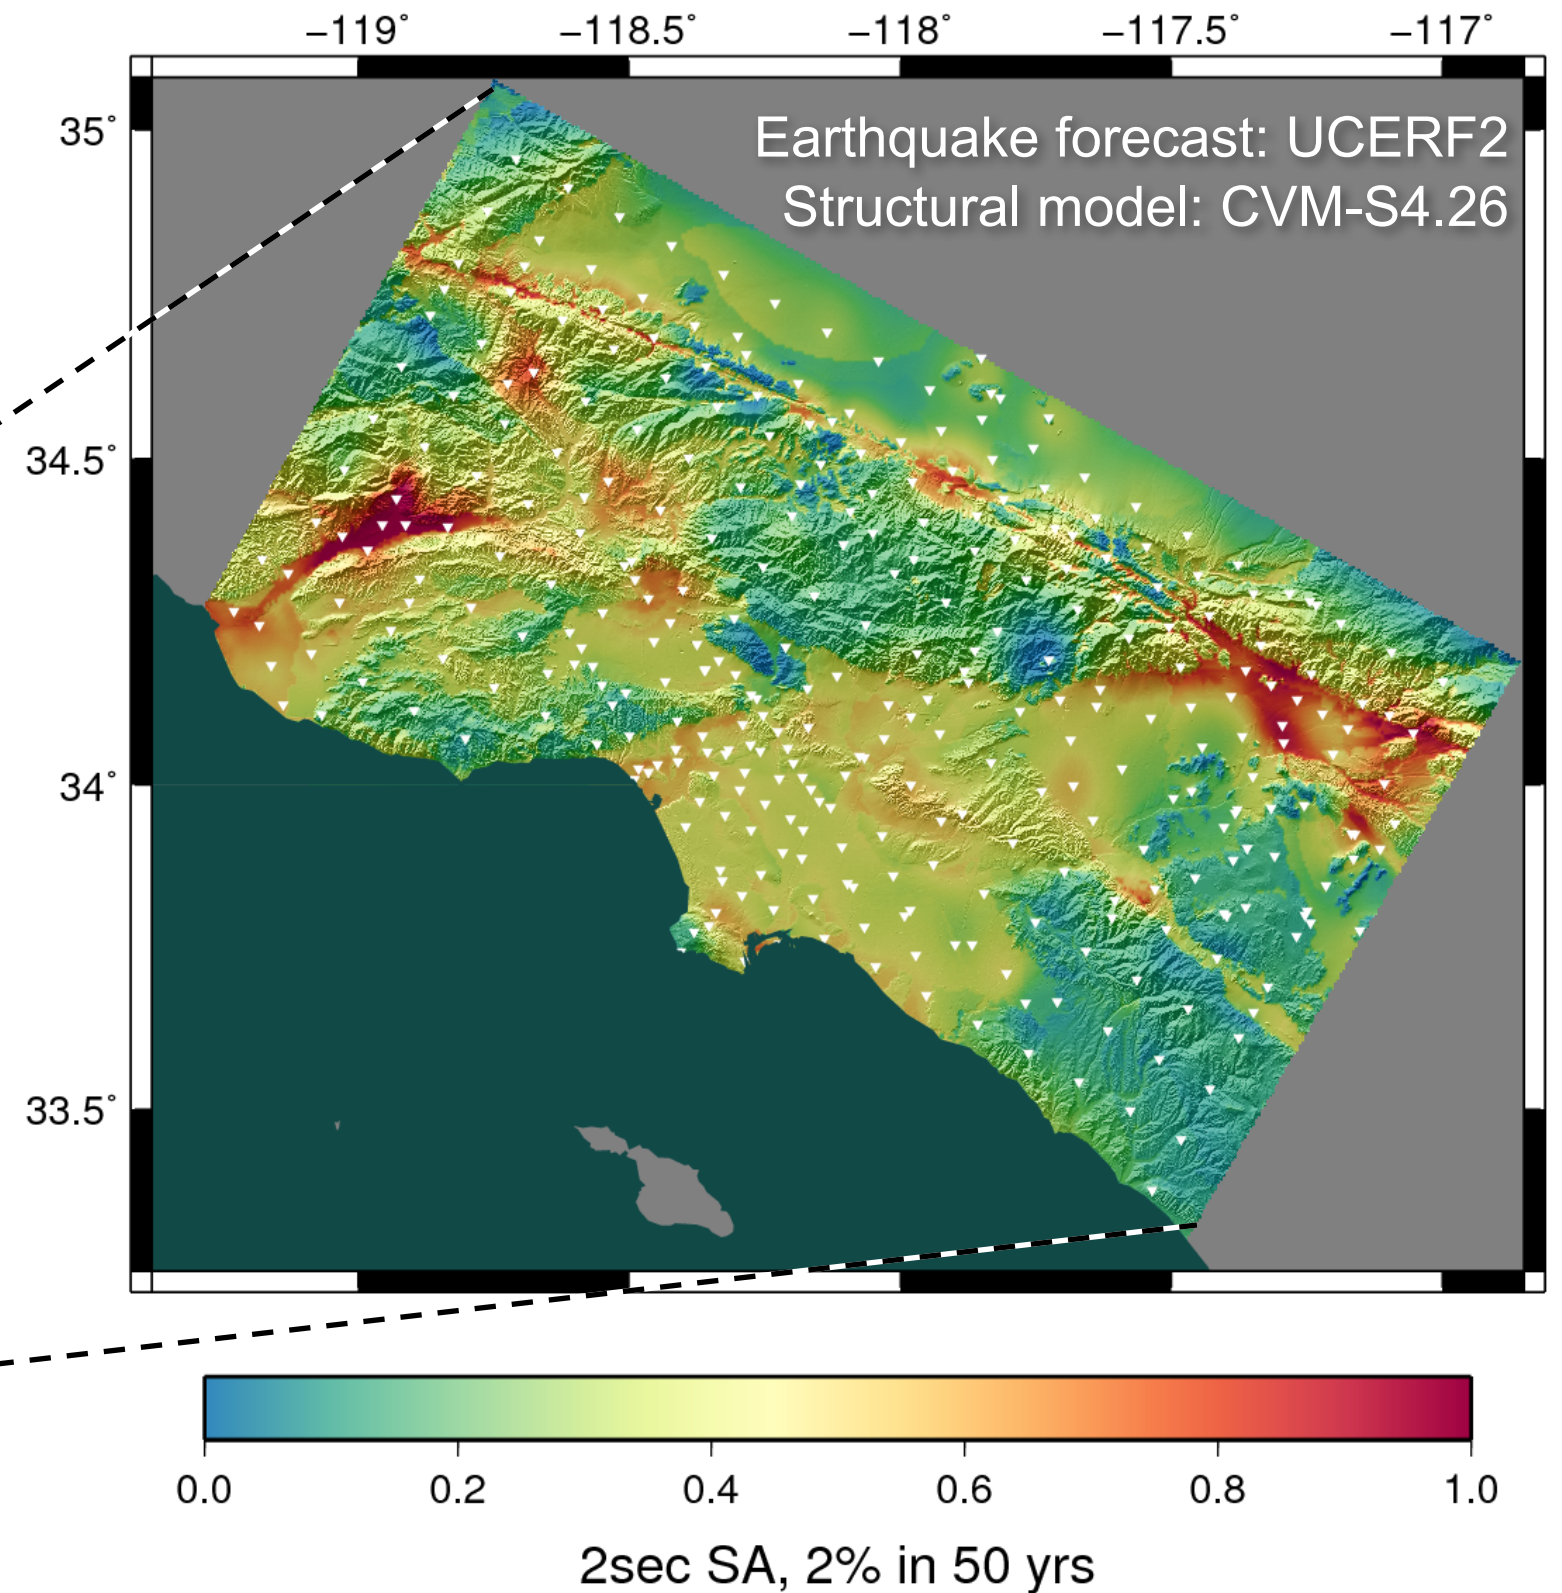

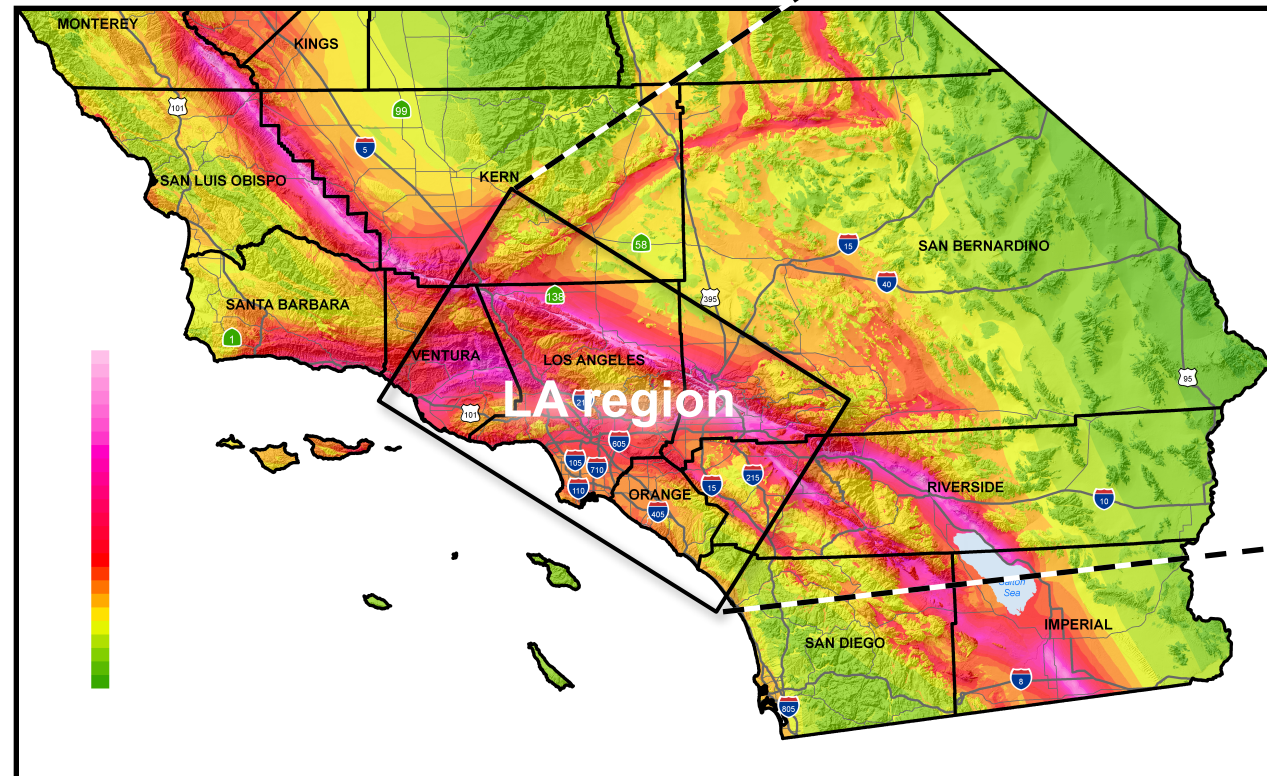

- *Are supercycles real? Has California been in a supercycle minimum?*
- *What are the transition times to periods of enhanced seismic activity?*
- *How frequent are large earthquakes during the peak episodes?*

# *CyberShake Hazard Model*

**Reciprocal method for simulating  
seismograms at long periods ( $> 1s$ ) for  
large ( $> 10^5$ ) ensembles of UCERF  
rupture catalogs**

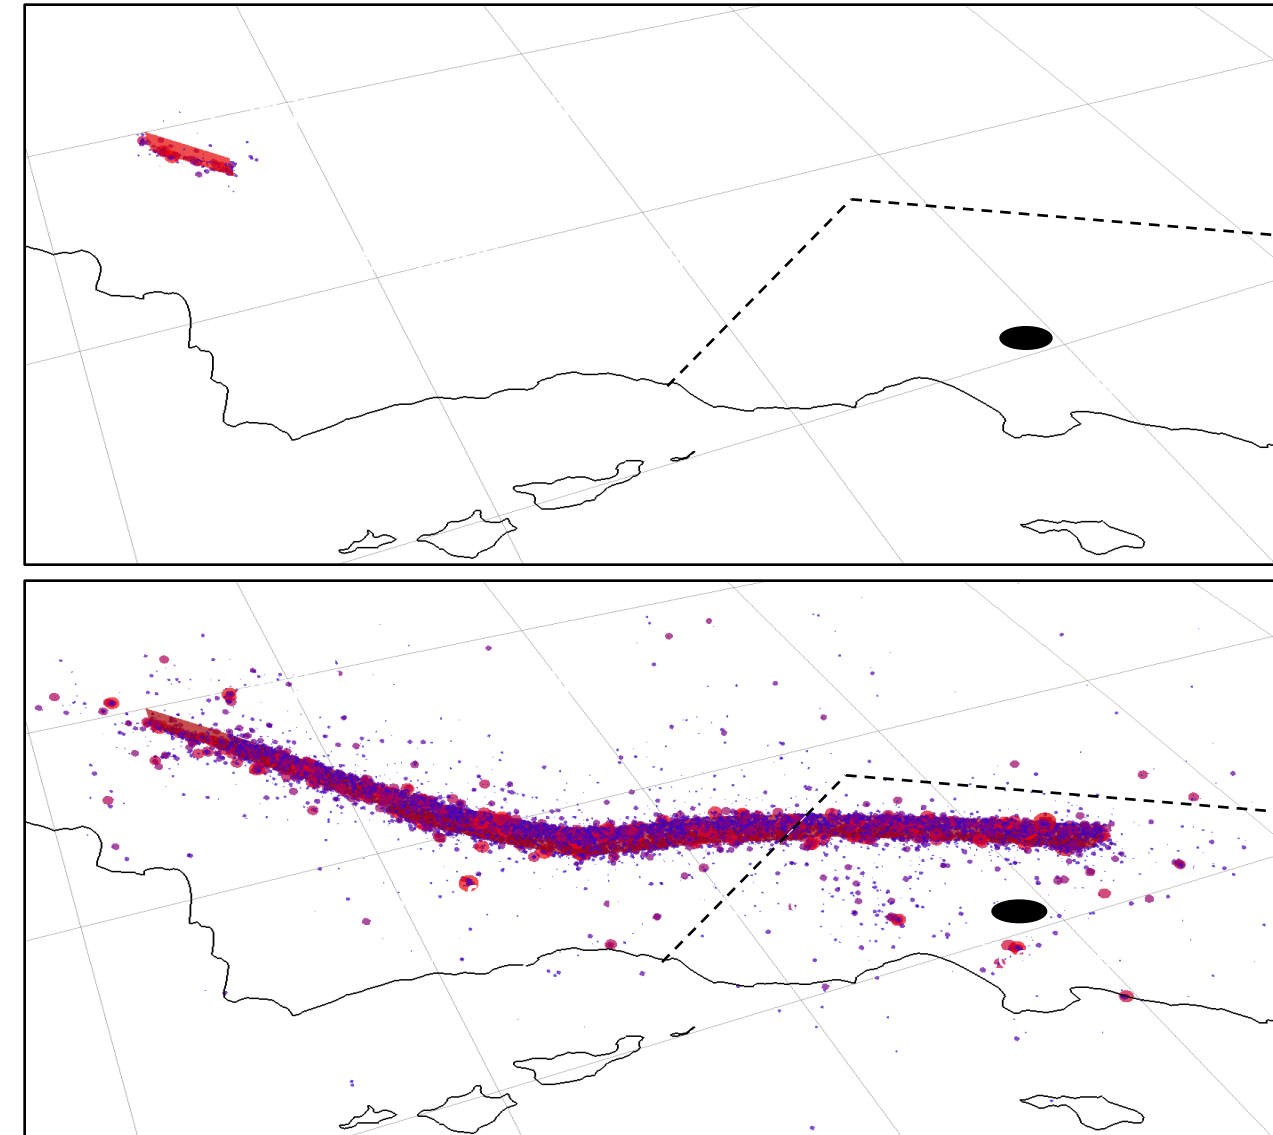

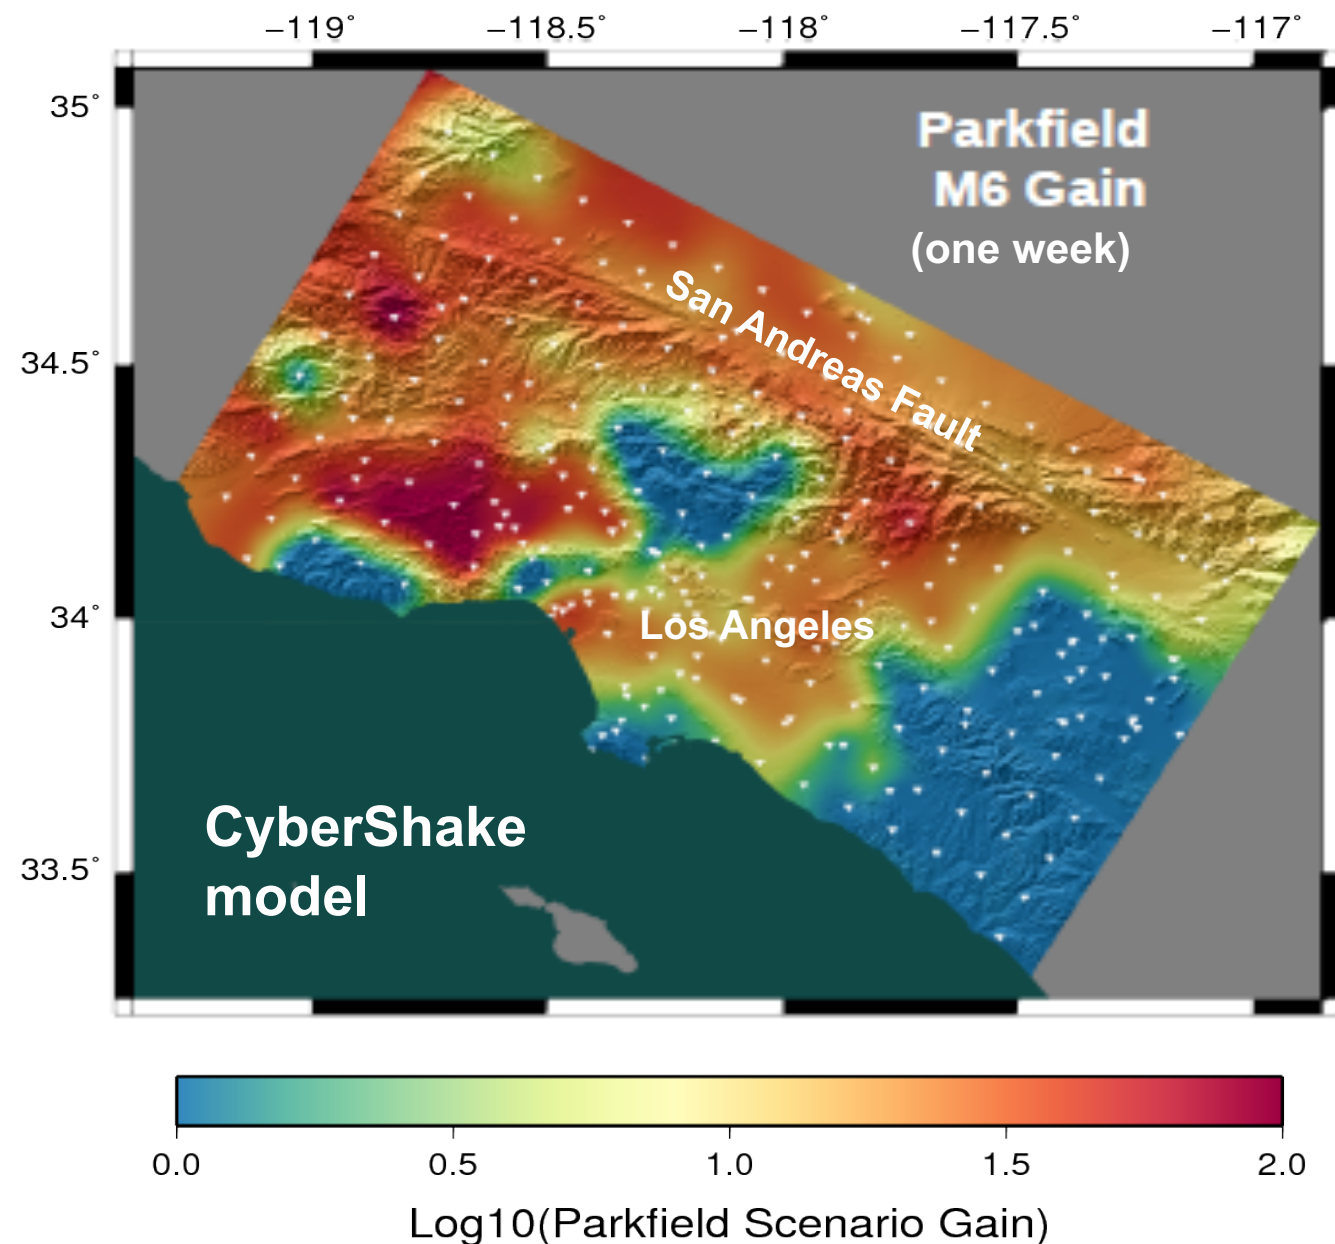

(Graves et al., 2011)

# *Coupling CyberShake with UCERF3-ETAS*

**Because it may be a foreshock of a large San Andreas rupture, a Parkfield earthquake significantly amplifies the shaking hazard in Los Angeles**

**This calculation couples UCERF3-ETAS with the CyberShake simulation-based ground motion prediction model**

Milner, Jordan & Field (2015)

# *Collaboratory for Interseismic Simulation and Modeling (CISM)*

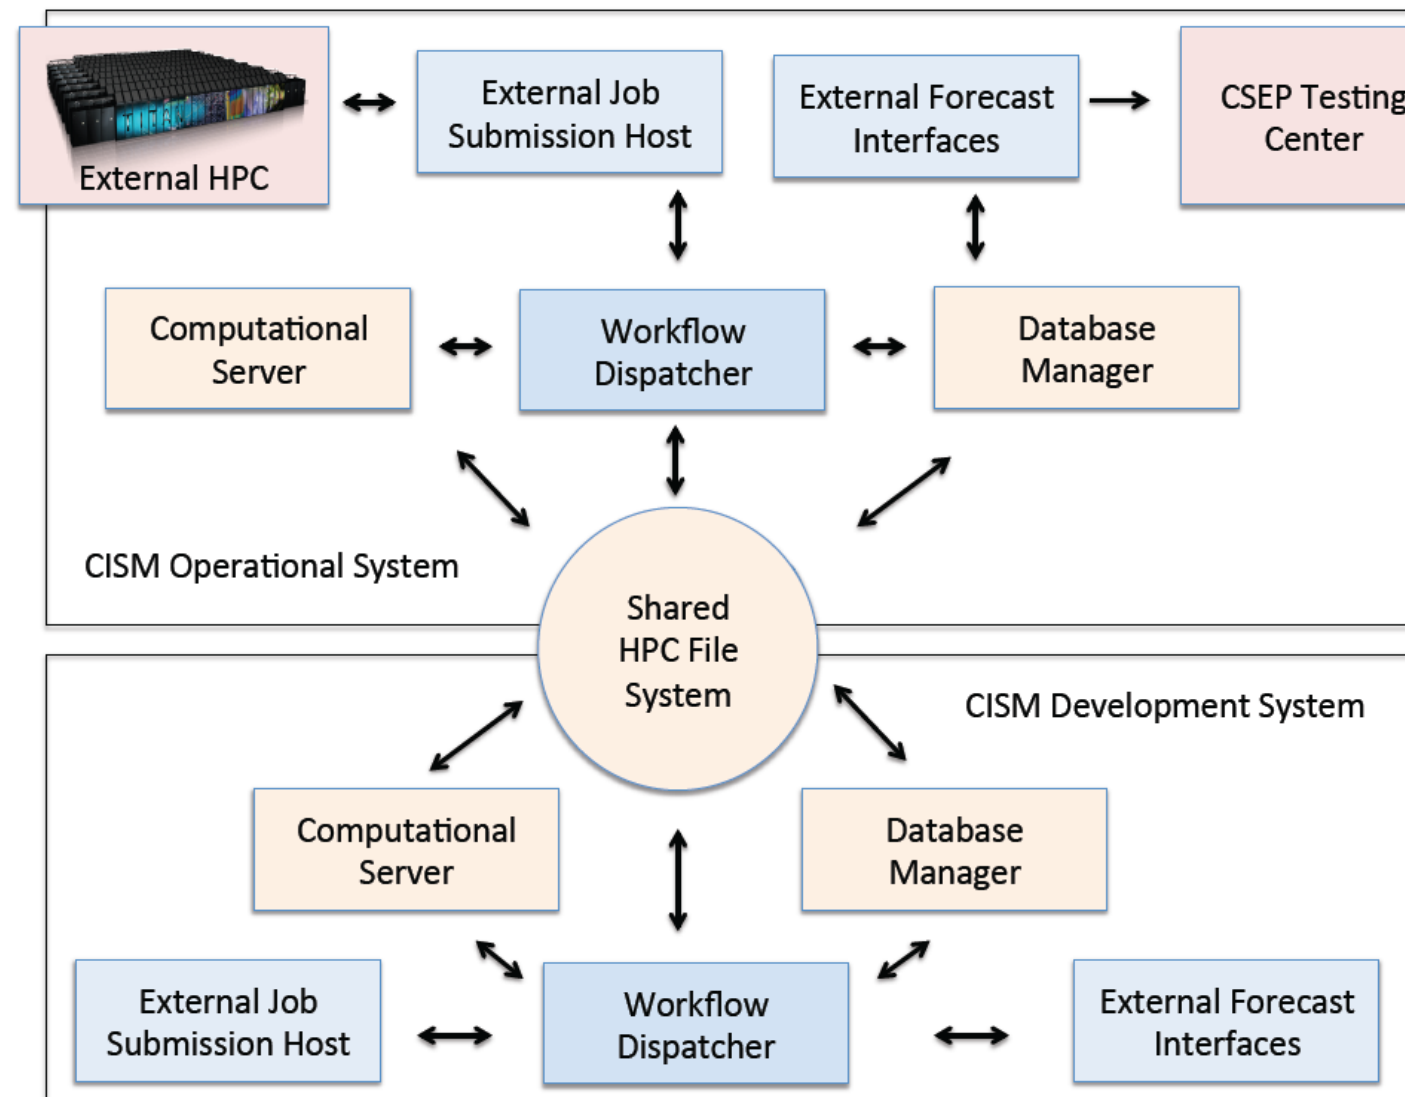

## **Project Objectives**

- **Develop a collaboratory where interdisciplinary teams can create system-specific models for time-dependent earthquake forecasting that are comprehensive, physics-based, data calibrated, and prospectively testable**
  - Develop rupture simulators and ground-motion simulators using California as the primary test bed
  - Combine time-dependent earthquake rupture forecasting models with ground motion prediction models to forecast exceedance probabilities
  - Test models in CSEP and by other means (e.g., using virtual earthquakes)
- **Develop a high-performance, workflow-oriented cyberinfrastructure that facilitates model verification, simulation, validation, and data assimilation**
  - Provide researchers with advanced tools for integrating heterogeneous sets of scientific software modules into testable forecasting models
  - Maintain a high-performance computing environment in which system-level models can be rapidly executed and analyzed
- **Initiate WMKF Fellowships in Earthquake Forecasting Research**
  - Sponsor CISM participation of early-career scientists

# *Collaboratory for Interseismic Simulation and Modeling (CISM)*

## Cyberinfrastructure Objective

- Implement a high-performance, workflow-oriented cyberinfrastructure that supports research on comprehensive physics-based forecasting models by facilitating earthquake simulation and data assimilation

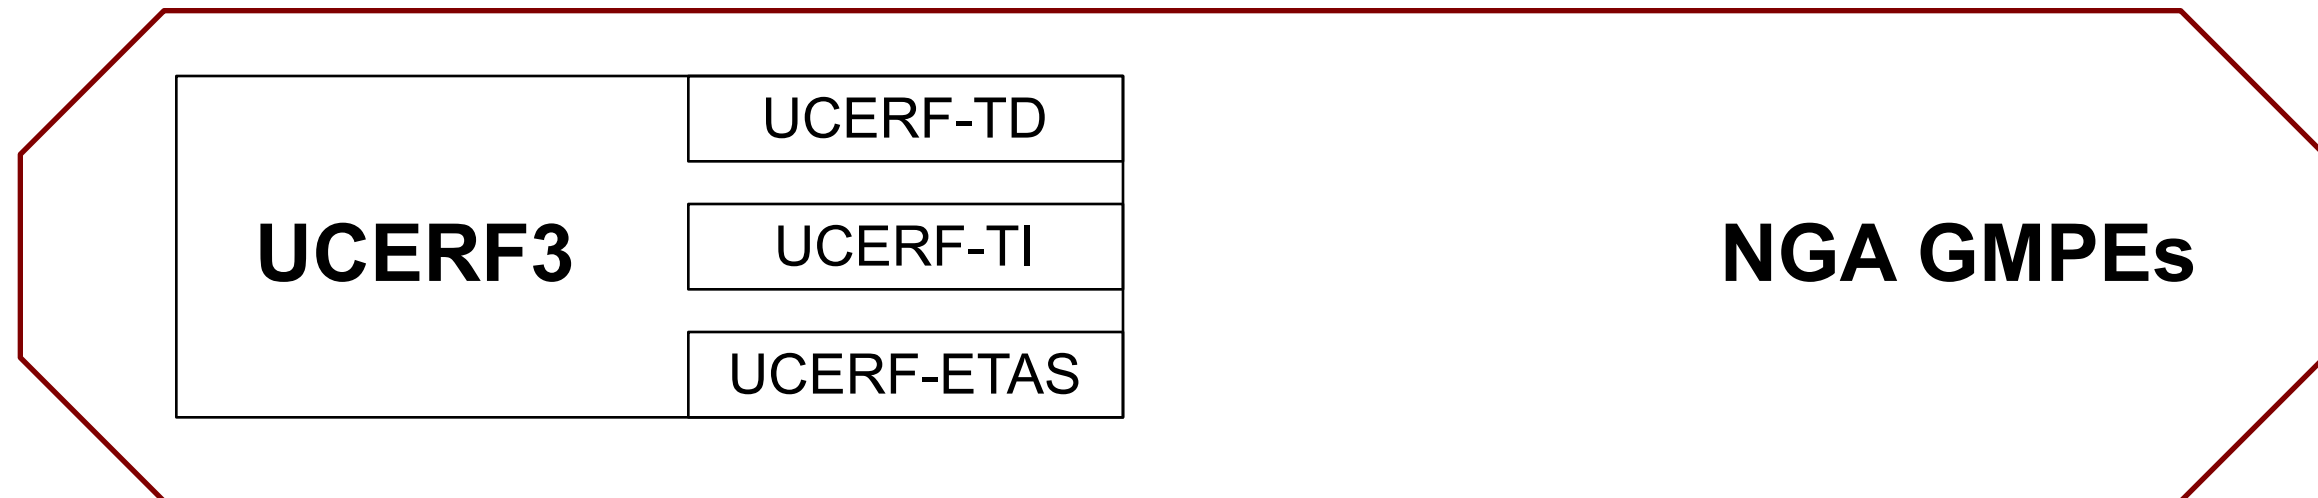

# *CISM Structural Elements – Year 1*

## *RSQSim Platform*

## *CyberShake Platform*

**NGA GMPEs**

## *OpenSHA Platform*

***CISM***

# CISM Validation Studies

## Earthquake Rupture Forecasting

<b>RSQSim</b>	RSQS1
	RSQS2
	⋮
	RSQSn

Comparative testing with UCERF3

Retrospective testing:

- Historical seismic catalogs
- Paleoseismic model catalogs

<b>UCERF3</b>	UCERF-TD
	UCERF-TI
	UCERF-ETAS

Comparative testing with RSQSim

Prospective testing:

- Collaboratory for the Study of Earthquake Predictability (CSEP)

## Ground Motion Prediction

### CyberShake

Retrospective testing:

- Historical seismograms
- Fragile geologic features

Comparative testing with GMPEs

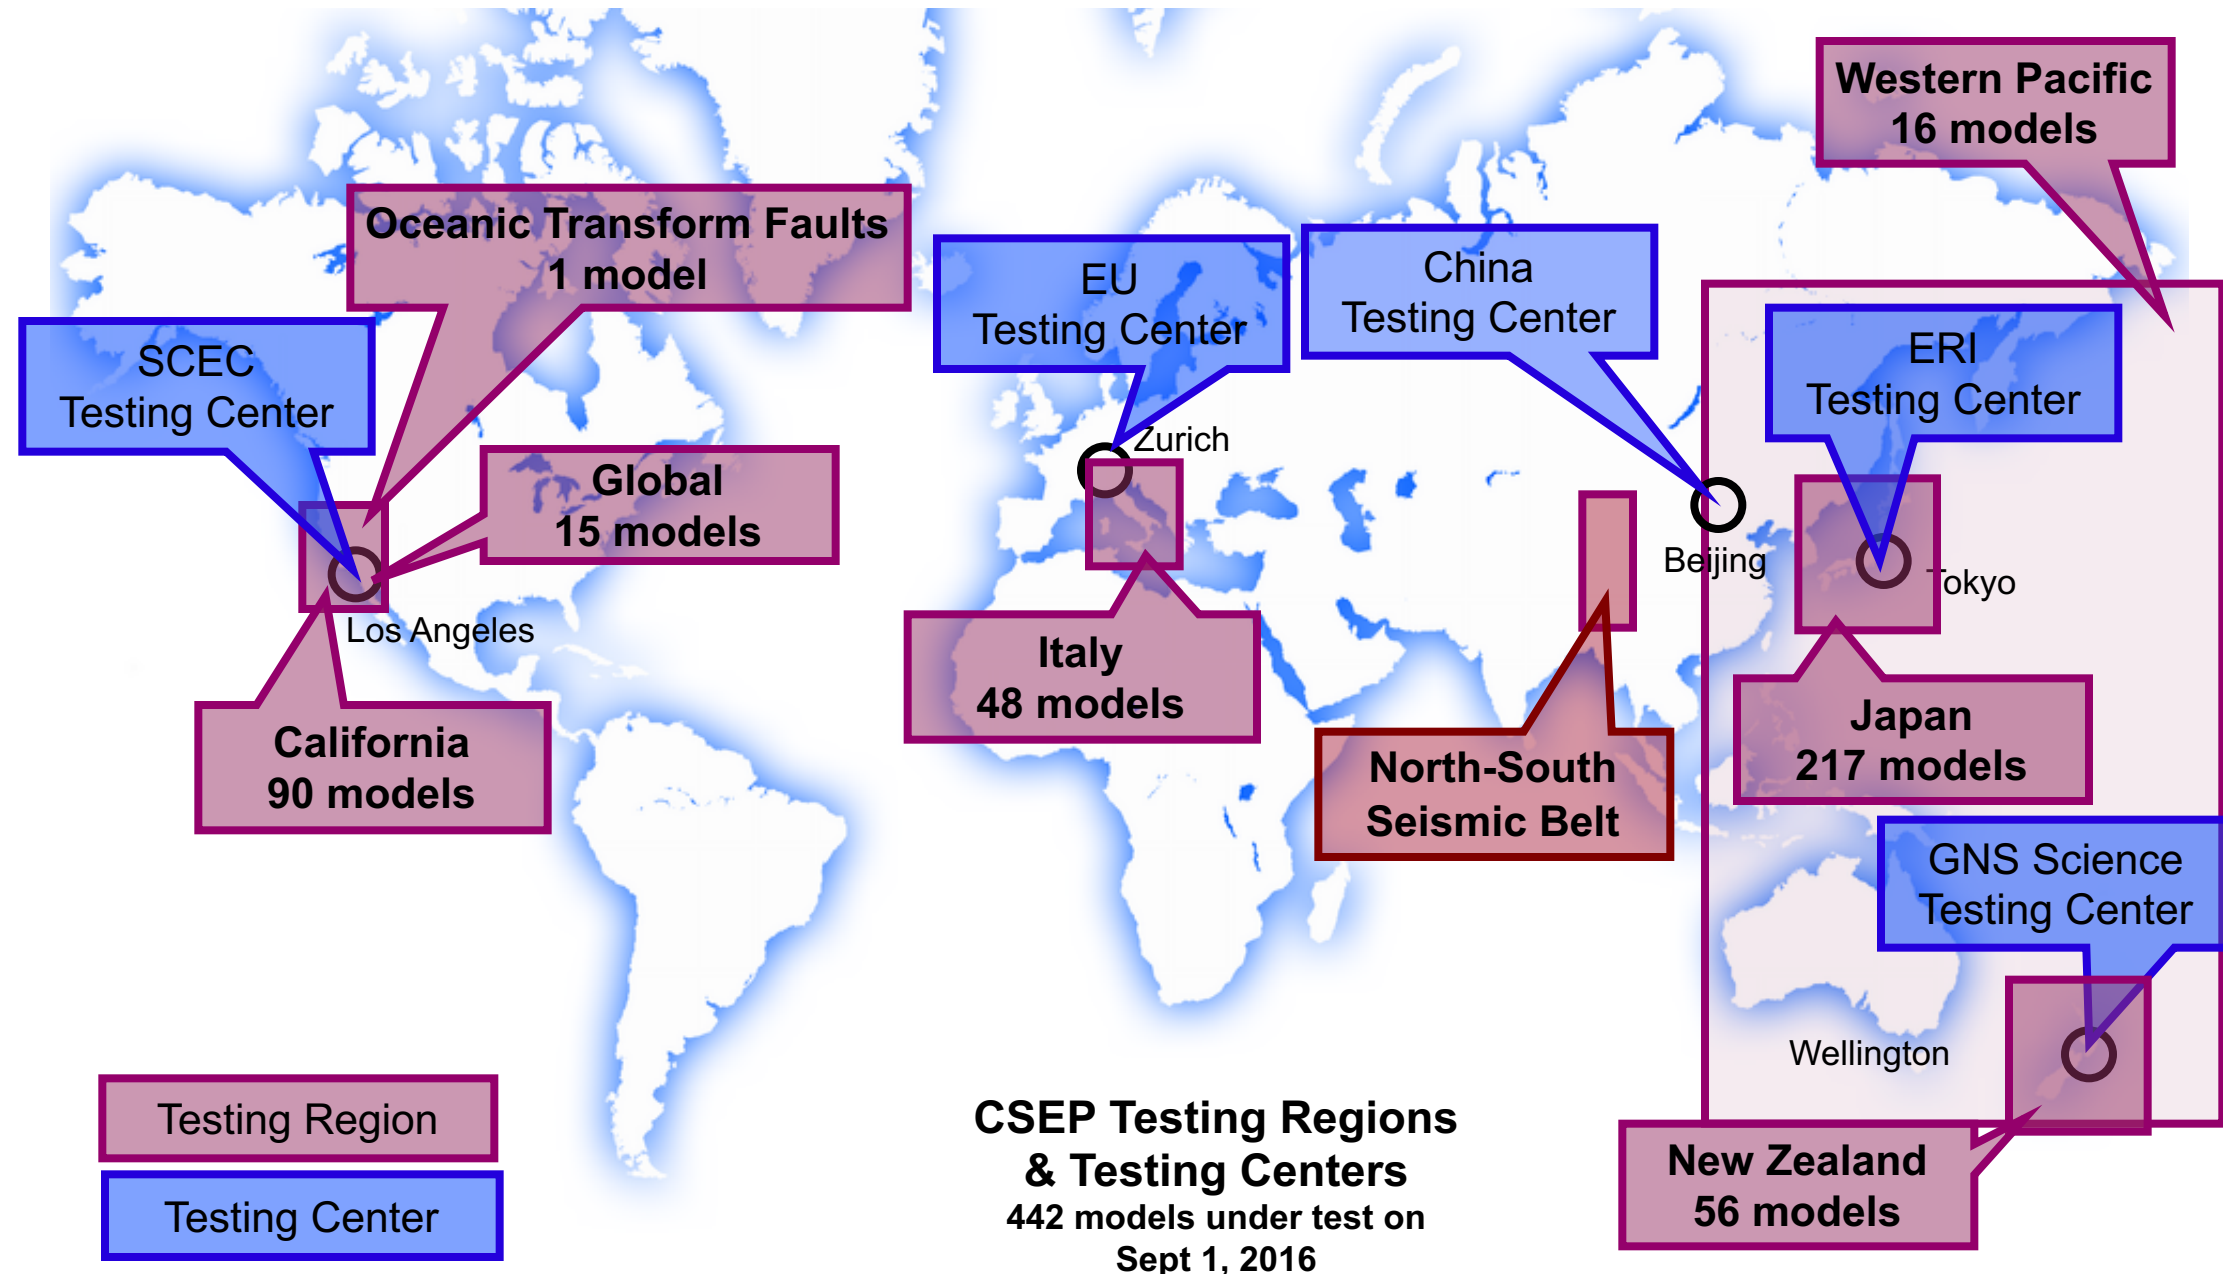

Prospective testing:

- Intensity measurements
- ShakeMap observations
- Virtual earthquakes

### NGA GMPEs

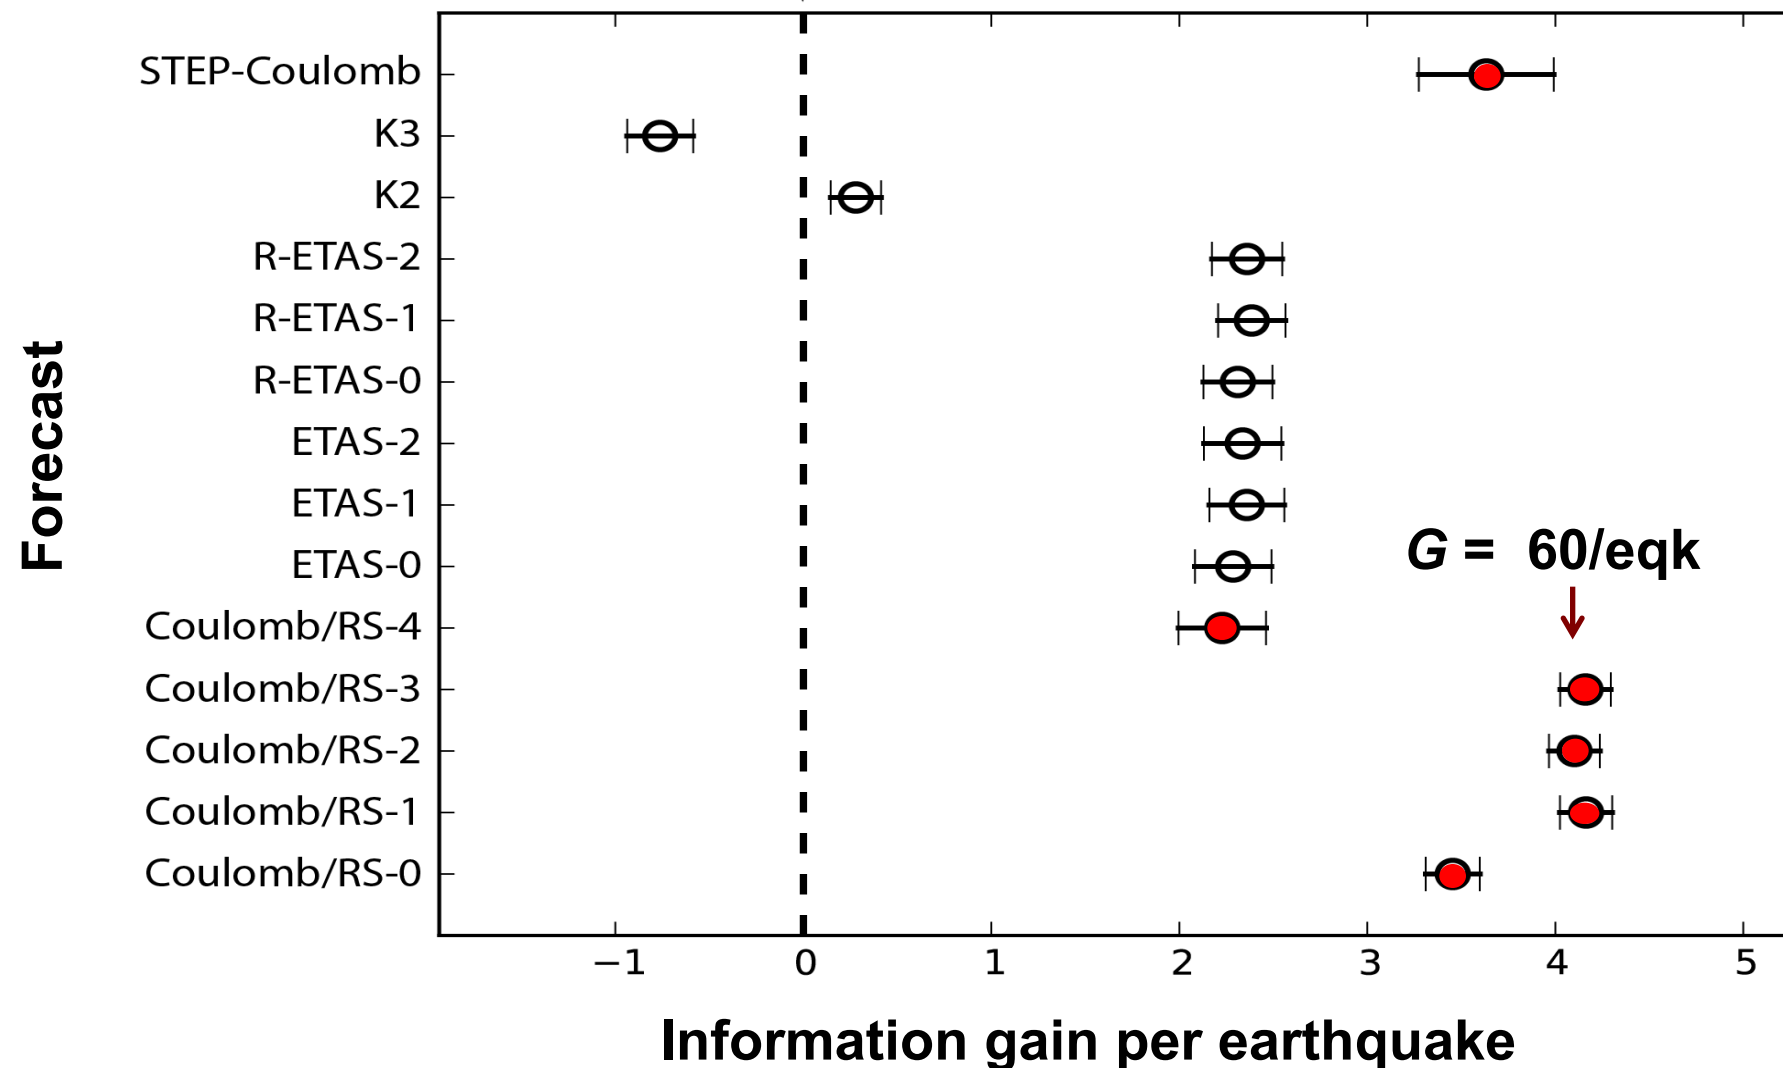

# *Collaboratory for the Study of Earthquake Predictability*

Infrastructure for automated, blind, prospective testing of forecasting models in a variety of tectonic environments and on a global scale

# CSEP Testing in New Zealand

Testing region: **New Zealand (Canterbury sequence, retrospective)**  
 Target events:  **$M \geq 4$  (394 events)**  
 Testing period: **4 Sept 2010 - 4 Mar 2012**  
**1 year**  
 Testing method: **T-test**

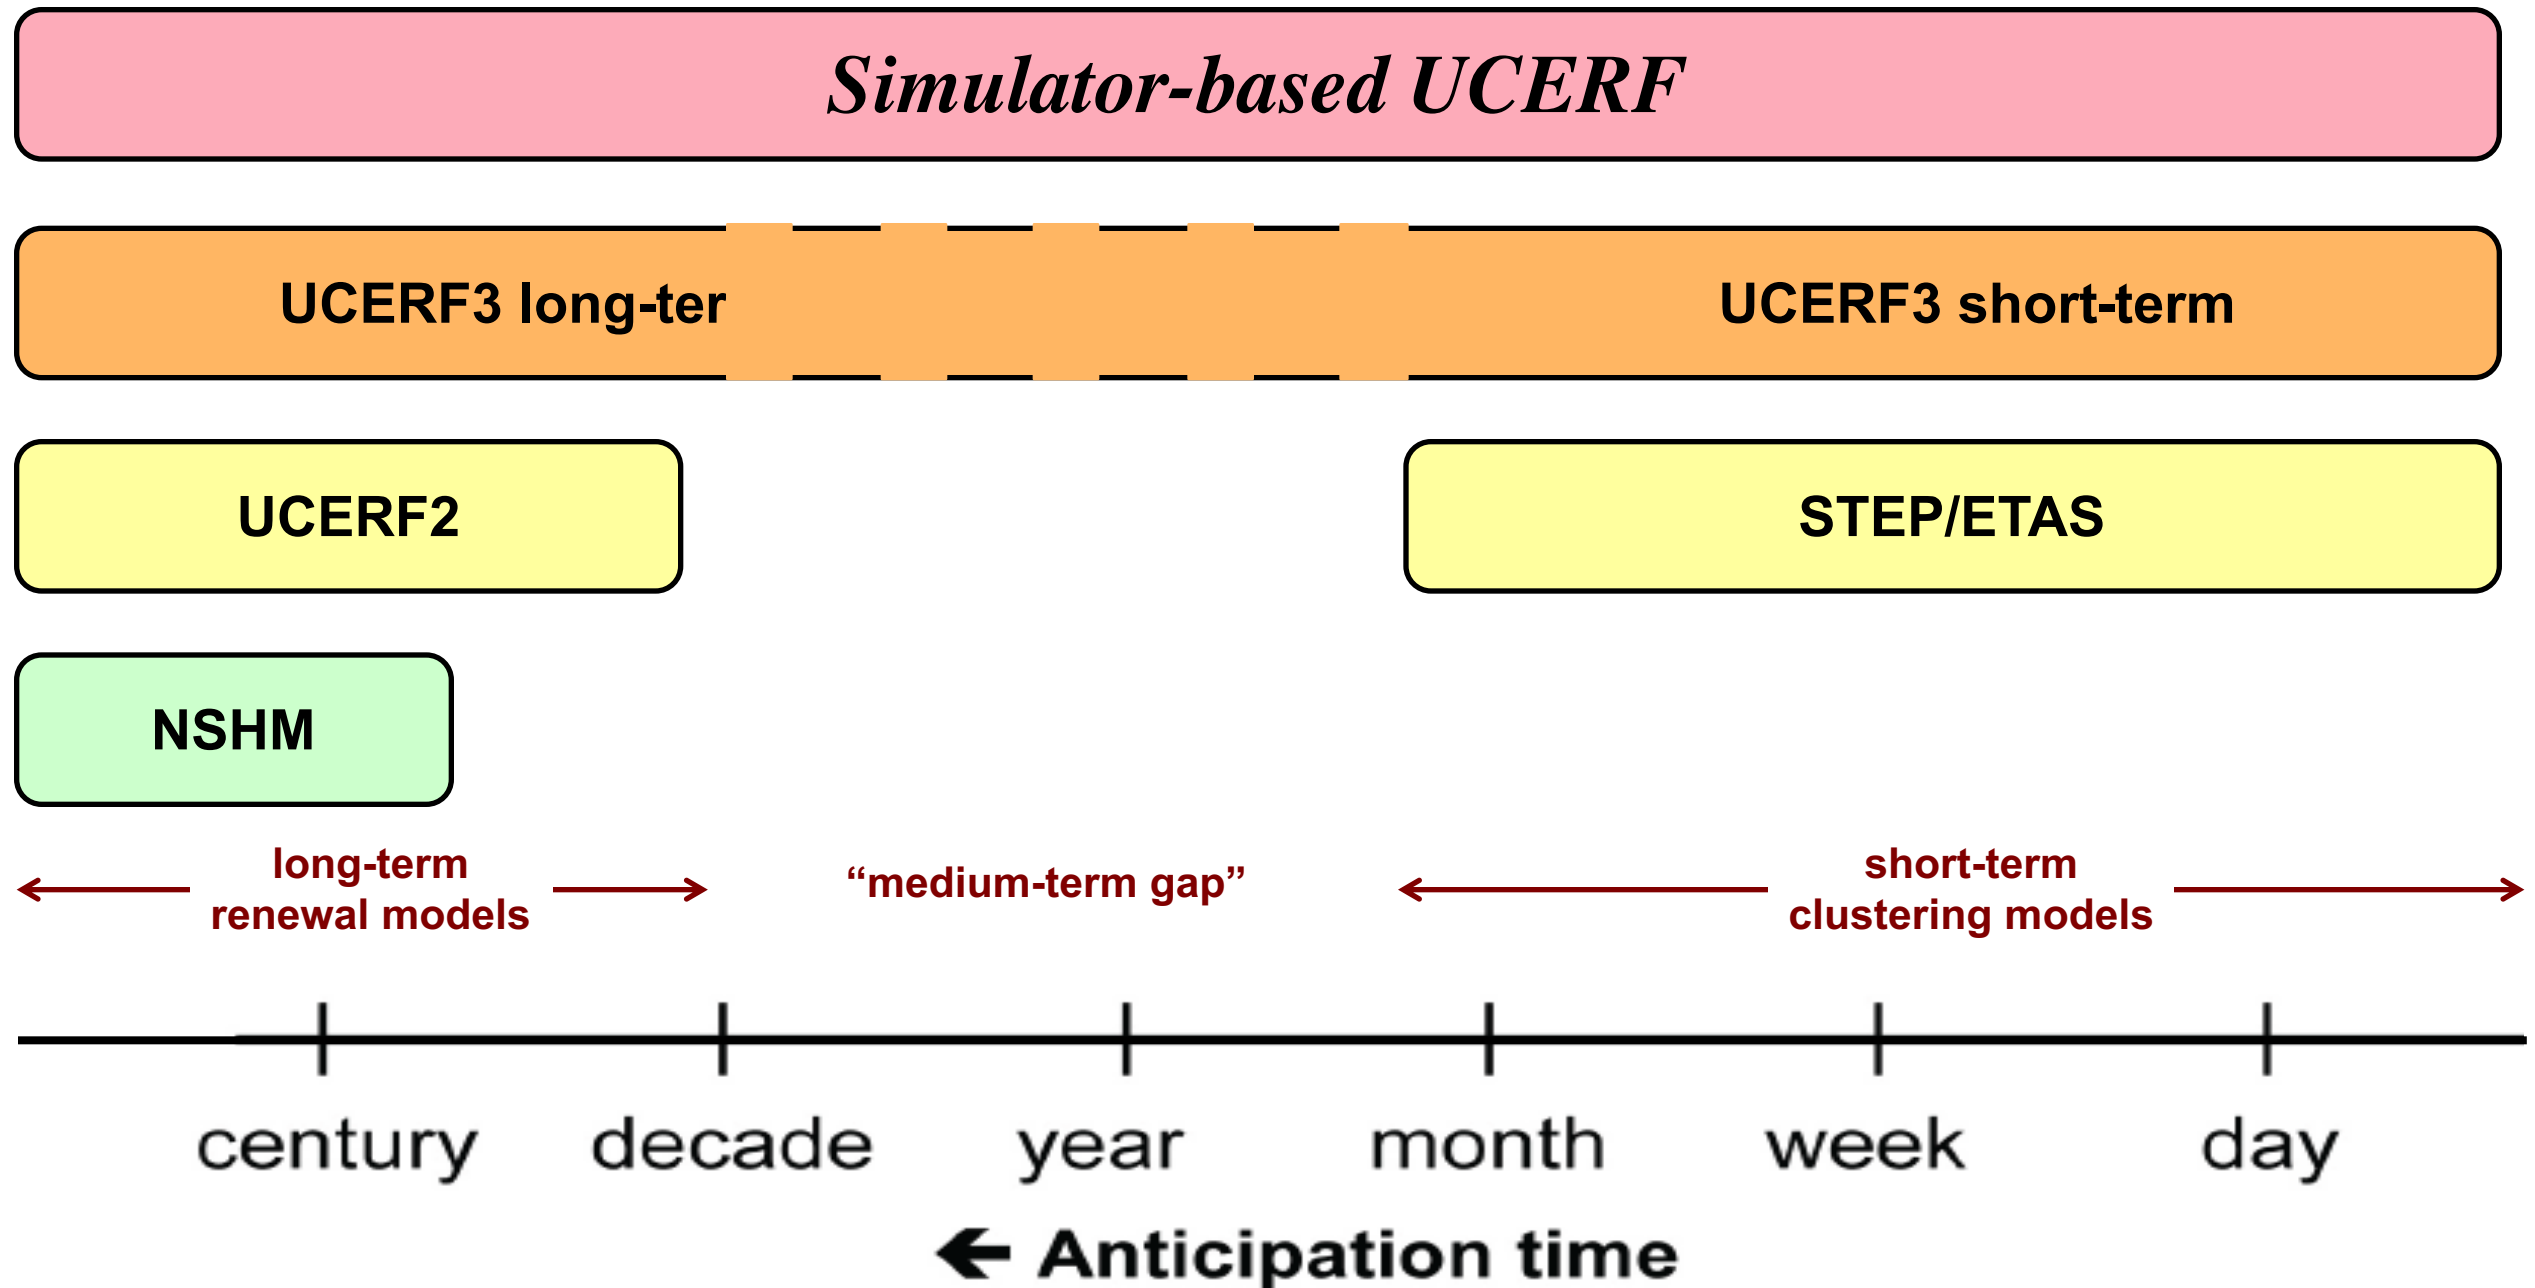

**Physics-based models  
outperform statistical  
models in short-term  
forecasting**

○ Statistical model  
● Physics-based model

(Werner et al., 2015)

# California Earthquake Forecasting Models

# *CISM Working Groups*

- **Working Group on California Earthquake Probabilities**
  - Chair: Ned Field
  - IT liaison: Kevin Milner
- **RSQSim Working Group**
  - Co-Chairs: Jim Dieterich and Keith Richards-Dinger
  - IT liaison: Kevin Milner
- **A-Team**
  - Chair: Dave Jackson
  - IT liaison: Kevin Milner
- **CyberShake Working Group**
  - Chair: Christine Goulet
  - IT liaison: Scott Callaghan
- **CSEP**
  - Chair: Max Werner
  - IT liaison: Masha Liukis

## ***CISM Objectives – Year 1***

- 1. Develop formats for exchanging data across the ERF → GMP → EHM computational pathway**
  - Develop RSQSim workflows
- 2. Generate RSQSim catalogs for UCERF3 fault system**
  - Derive empirical probability distributions to condition UCERF forecasting variables
  - Prototype physics-based ERF using RSQSim
- 3. Couple UCERF3 to the CyberShake (LA region)**
  - Demonstrate UCERF3-ETAS → CyberShake as OEF prototype
- 4. Submit a short-term ERF for CSEP testing**
  - UCERF3-ETAS

## ***Collaboratory for Interseismic Simulation and Modeling (CISM)***

### **Palm Springs Meeting Agenda, Sunday, Sept 11**

07:30 - 08:00 *Continental Breakfast & Check-In*

08:00 - 08:20 Introduction to CISM

Tom Jordan

08:20 - 09:00 Multiscale forecasting using UCERF3

Ned Field

09:00 - 09:40 Earthquake forecasting using the RSQSim earthquake simulator

Jim Dieterich

09:40 - 09:50 Contributions of the UseIT summer research program to CISM

Kevin Milner

09:50 - 10:00 Generating long RSQSim catalogs for CISM analysis

Jacqui Gilchrist

10:00 - 10:15 Discussion: Use of simulators in CISM forecasting research

All

10:15 - 10:30 *Break*

10:30 - 11:00 Testing forecasting models in CSEP

Max Werner

11:00 - 11:30 Is there an earthquake drought in California?

Dave Jackson

11:30 - 11:45 CyberShake as a CISM ground motion prediction platform

Scott Callaghan

11:45 - 12:00 Discussion: CISM plans for 2017

All

12:00 - 13:00 *Lunch*

***End***

# *Collaboratory for Interseismic Simulation and Modeling (CISM)*

## Project Goal

Develop a collaboratory where interdisciplinary teams can create system-specific models for time-dependent earthquake forecasting that are comprehensive, physics-based, data-calibrated, and prospectively testable

# *Synchronization Signature in RSQSim Sequences*
