

## **Workshop Report: Crustal Deformation Modeling**

Andrew Freed (PI), Purdue University  
Brad Aagaard (co-PI), United States Geological Survey  
Mark Simons (co-PI), California Institute of Technology  
Charles Williams (co-PI), GNS Science  
Eric Hetland (co-PI), University of Michigan  
Rowena Lohman (co-PI), Cornell University  
Brendan Meade (co-PI), Harvard University  
Thorsten Becker (co-PI), University of Southern California  
Carl Gable (co-PI), Los Alamos National Laboratory

The workshop organizing committee decided to switch from annual workshops to biannual workshops and did not hold the anticipated workshop. This new schedule will allow us to keep the scientific discussions interesting and reduces the burden on the funding agencies.

We did hold an unfunded virtual workshop focused on providing training in the use of crustal deformation modeling tools. This maintained continuity in our series of annual tutorials. The virtual workshop (using Adobe Connect through UC Davis/CIG) was very successful in providing training to over 70 people. A majority of the participants were in the US, with other participants in Singapore, Japan, Great Britain, New Zealand, Turkey, Mexico, Netherlands, Italy, Nigeria, and India. The workshop materials, including archived audio/video of the sessions are available online at <http://www.geodynamics.org/cig/community/workinggroups/short/workshops/cdm2011>.
