

SCEC Technical Report, 2019

SCEC Award: 19125

Project title: Partitioning of strain between the San Andreas fault, San Geronio Pass, and the ECSZ: Geologic and geodetic observations along faults of the Eastern Transverse Ranges

The proposed project was not funded. Instead, SCEC provided \$3k to cover travel and lodging expenses for participation in the annual SCEC Meeting in 2019. Dr. Katherine Guns used the funds to attend the meeting, where she presented her research poster titled "Detecting and Reducing the Effects of Postseismic Deformation in Observed GPS Time Series Using a Hybrid Forward/Inverse Method in Southern California."
